**W**hen Halifax writer Jim Bennet was a lad, Dalhousie was his playground. His father taught English at Dal, and the family lived on the corner of South Street and Dalhousie Street, at a time when neither was paved. Jim hiked across the campus every day to go to school on LeMarchant Street and played cowboys and Indians after school in the Studley woods.

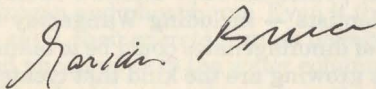

By the 1950s, he'd graduated to games of whist, bridge and poker in the common room of a men's residence (now the Education Building). As he observes in his story on the Studley campus, that didn't do much for his academic career. He eventually dropped out of Dal, but he maintained his attachment to the 41-acre plot of land that forms the heart of the campus. "I've always had a deep interest in Studley," he says. "I think it's a fascinating piece of land."

Bennet also has an interest in keeping in touch with his old Dal comrades, and that's one more reason that he's the ideal person to take a nostalgic look at the university's past. His warm, witty account of the history of the Studley campus starts on page 7.

One of the landmarks on campus in Bennet's younger days was the old Murray Homestead, a 19th-century home once owned by a governor of Dalhousie. The university razed the building in 1949 to make way for the Arts and Administration Building.

Fortunately, a lovely portrait of the homestead remains on campus: The Dal Art Gallery has in its permanent collection a watercolor of the building by Nova Scotia artist Ruth Wainwright. Wainwright, who was born in North Sydney, N.S., in 1902, lived most of her life in Halifax, where she died in 1984.

Wainwright's portrait of the Murray Homestead was presented to the art gallery in 1952 by the estate of the late Rebecca Cohn. We've reproduced that work on the cover of this month's magazine.

# Exploring the shellfish-toxin mystery

*Dal oceanography professor Peter Wangersky's basement toxin factory may play a role in preventing more mussel-poisoning scares*

[Photo by Michael Creagen]

**I**n a basement room at Dalhousie, a yellowish-red liquid is bubbling and gurgling in a 250-litre glass container. It is a truly vile brew.

"It's like working with cyanide," observes Peter Wangersky, the genial, white-bearded oceanography professor who is keeper of the cauldron. "We have to be careful that nothing escapes."

The CIA has used this kind of stuff to make poison pills. They kill within minutes by shutting off the breathing, gently.

Wangersky has a more sublime purpose for his potion. He's hoping that the microscopic organisms he's growing — a species of microscopic algae called dinoflagellates — will help solve the mystery of an ancient and deadly plague that is increasing in sea waters around the world.

The plague is caused by a population explosion, or bloom, of the algae, which stains the ocean water, contaminates shellfish

and can sicken and kill humans.

This winter, as federal government researchers scrambled to track down the culprit in Prince Edward Island's mussel-poisoning scare, some scientists — including Wangersky — suspected that some kind of dinoflagellates could be to blame.

The dinoflagellates he's growing are the kind that create a much more widespread problem — red tide, the bloom of algae that plagues many ocean waters, including the Bay of Fundy and part of the South Shore of Nova Scotia. Toxins produced by these algae include those that cause paralytic shellfish poisoning (PSP), a condition linked to several hundred deaths around the world every year.

To try to solve the red tide mystery, Dalhousie and the federal government are co-operating in a \$315,000 research project that began last April. The goal is to find a cheap, easy method of testing for toxins released by dinoflagellates.

## UP FRONT ON CAMPUS

"What we want," Wangersky says, "is first, a test that can be performed in any laboratory, and second, a test that can be performed by the aquaculturist himself, every day if necessary. To develop a test like this, we have to supply lots and lots of toxic material."

Wangersky's job is to produce that material for National Research Council scientists, whose job is to come up with the tests. The federal Department of Fisheries and Oceans is to supply information already known about red tide.

Currently, the standard way of testing for toxins is to inject an extract of the shellfish in a laboratory mouse. The test is non-specific — that is, if the mouse dies, the researcher knows only that the material is not fit to eat. And it usually takes four or five days for a report to come back when the sample is sent to a lab with a mouse colony.

Once researchers come up with a test, they can also try to find out what effect the environment has on the production of toxins.

"There is a question about whether the organism is more deadly at one time of year or another," Wangersky says. "We are in a good position to manipulate the nutrients it gets, as well as the light and temperature."

Red tides have been recorded in human history since the time of the pharaohs. When God wanted to free the children of Israel from the Egyptians, the Book of Exodus says, He cursed the land of Egypt with hail, locusts, disease and rivers that ran with blood.

In recent years, the red-tide plague has been growing throughout the world. Some scientists blame increased pollution by nitrates and phosphates in coastal waters. This pollution could come from a variety of sources, Wangersky says: population growth, increased fertilization of farms — and even aquaculture.

"If you're growing salmon or trout, for instance, you're adding chopped-up fish or fish meal to the water. The fish don't eat it all, and a lot of it goes down to the bottom, decomposes and releases nitrogen and phosphorus. Even if they do eat it, their excreta furnish nitrogen and phosphorus to the water column."

Similarly, mussels gather phytoplankton as the tide moves water from the whole bay back and forth and drop the waste product directly below, concentrating it in one spot.

Wangersky's interest in red tides dates back to the beginning of his career. Since moving to Dal from Yale University in 1965, he has focused much of his work on particles in sea water — where they come from, where

they go, how they contribute to the production of bacteria and phytoplankton — but "I've always kept an interest in red tides, and kept an eye on the research that was going on."

A native of Rhode Island who spent his undergraduate years at Brown University and obtained a doctorate in zoology from Yale, Wangersky did his first research project in 1950 on dinoflagellates in the Gulf of Mexico.

"What we were really trying to do was to raise the organisms, which at that time was impossible."

That type of algae kills fish and releases a solution into the atmosphere that causes a "red-tide hack" common around Florida. "It irritates the throat and nasal passages so that everyone around it sounds like the last act of Camille."

After that, he worked as a chemist

# PUTTING TECHNOLOGY TO WORK

*Now, it's easier than ever to take your computer with you, if it's the Zenith Z-183. Weighing less than 12 pounds, this revolutionary laptop computer features large capacity 3½" drives, an illuminated screen and is IBM PC/XT compatible.*

*Call Today For Special Offer on the Eazy-PC*

The desktop Z-159 is so complete, that it has been chosen by hundreds of leading corporations and universities throughout the country. It's 60% faster than most competing models because of ⅜ Mhz switchable clock . . . with standard 512K RAM (without expansion card) and expandable up to 640K. And the portable Z-183 PC is designed so you can carry it with you anywhere. Perfect when you need a lot of computer power to go. Whatever your choice, the Zenith Z-100 PC's are the "Total Performance" solution to all your personal and business computing needs!

## UP FRONT ON CAMPUS

with the U.S. Army, a chemical oceanographer for the U.S. Fish and Wildlife Service and as a researcher at the University of Miami and Yale.

In 1978, he spent a sabbatical year in Norway, learning how to produce phytoplankton. Subsequently he developed a technique — soon to be patented in Canada and the United States, he hopes — for mass production of organisms to feed clams and mussels.

Recently, he decided this would be "the perfect technique" to grow *Protogonyaulax tamarensis*, the main dinoflagellate in the East Coast region. He discovered his method could be used to supply "lots and lots" of toxic material to NRC researchers who are trying to determine the chemical structure of the toxins.

The toxins that *tamarensis* produces are similar to those put out by a dino-

flagellate common in southeast Asia — where red tide is such a problem, the Association of Southeast Asian Nations has proposed a \$30-million program for monitoring it.

"Any test that we worked out that would work with *tamarensis* would work with their beasts directly," Wangersky says.

Such a test also should make it easier to develop one for the toxin that contaminated Prince Edward Island mussels last fall, when three people died and more than 100 became ill after eating the shellfish.

"Once you have found out how to do this kind of research, then it goes a lot easier. It's the same thing with growing these beasts. We had a terrible time getting our first species of anything to grow."

He suspects cultured mussels will be

tested more routinely in future. Mussel growers are restricted to areas where PSP has not occurred. But PSP is spreading.

"Normally, we had PSP in the Bay of Fundy, and there's a long record of problems along the Gaspé. But last year it came up around the corner (of Nova Scotia), and it's appeared in Newfoundland where it never appeared before. So in future, I think there will be more testing of cultured mussels than in the past."

The ultimate goal, Wangersky says, is for a simple field test, "a little kit you can give to the man who raises mussels. He can squish 'em up a bit add a few chemicals and look for a color change."

In the meantime, he'll continue to eat clams and mussels "every chance I get — and will until they become so expensive I can't afford them." □

## Marriott prepares for next career

**T**ed Marriott has retired as dean of student services at Dal, but he has no plans to buy a rocking chair.

"After 43 years, it's time for me to leave and provide myself with the latitude to do a lot of things outside the campus," Marriott says. "I'm still going to be involved in education of some kind, but I want to do it not for money."

He's not sure what his next project will be, but he expects to be ready to make some decisions after some relaxation and a trip to Australia and New Zealand in April with his wife, Lois (BA '46, Dip Ed '47). She's a former school teacher who resigned from a job as lecturer at Mount St. Vincent University when her husband retired at the end of December.

Marriott first came to Dal to teach in the faculty of education with the naive notion that he could solve all the problems he had seen during two decades of work in Nova Scotia's public school system.

"Obviously the problems weren't solved that easily," he says. "But it was still a fun and rewarding experience."

Before coming to Dal, Marriott taught for several years in Halifax public schools, was an inspector of schools in both Hants and Halifax counties, and served as superintendent of schools for the Municipality of Halifax. At Dal, he taught and became assistant dean of

*Marriott's not leaving education*

student services and eventually dean.

Over the years, he developed a philosophy of teaching: The teacher is merely a catalyst, and teaching is a privilege. Teachers simply set the stage for students to develop their own dreams and self-expectations.

One of his most rewarding experiences as an educator, he says, was a project he and his wife worked on for seven years when he first came to Dal. Working on a voluntary basis, they conducted a pre-school program in a Black community outside Halifax to try to prepare kids there for school.

"We got great satisfaction out of that," Marriott says. "We enjoyed the kids and we enjoyed the people in the community. That's an example of the kind of thing I'd like to do now." □

## Ban on smoking expected by fall

**D**alhousie is about to butt out. Dr. Joe Johnson, director of environmental health and safety for the university, is hoping a smoking ban will be in place by fall throughout the university, except for some designated areas where air can be vented to the outside.

The ultimate goal, he says, is for a completely smoke-free campus.

The anti-smoking move comes after a campus survey in which 82 per cent of the 1,600 respondents (students, faculty and staff) said they would comply with a ban.

On the basis of the survey, Johnson recommended a smoking ban to President Howard Clark, who agrees with the recommendation, Johnson says.

Those surveyed strongly supported a smoking ban in cafeterias and common lounges. The survey showed that many students, faculty and staff have quit smoking and most students and faculty have never smoked.

Johnson, a reformed smoker who puffed on a pipe for 40 years — "only in the evenings, so I'm no hero" — realizes all smokers are not going to be able to quit overnight.

But he adds: "There's no way, from a medical point of view, one can recommend smoking, and from an environmental point of view, it's no longer acceptable." □

## "This place is going to jump"

*Murray Farr thinks arts centre patrons are ready for something a little different*

One of Murray Farr's first tasks as the new director of the Dal Arts Centre was to wade through stacks of promotional material from theatrical agents.

At the bottom of the pile, he discovered a tape by a northern Manitoba Métis musician who plays button accordion and fiddle.

"I was fascinated," says Farr. "It's a music that's almost been lost. I wanted to find out all I could about him."

That response indicates Murray Farr's exploratory approach to the arts — an approach that should result in what he describes as a "consciousness-raising" lineup of events for the 1988-89 season.

He concedes that nearly extinct native music might be a touch esoteric for some, but he also believes the university is responsible for exposing the community to art forms it might never encounter elsewhere.

"This place is going to jump," he promises.

The spring program at the Cohn theatre includes a Nova Scotia production of *Hank Williams: The Show He Never Gave*. After that, the Cohn will have a busy, star-studded spring — 58 performances in a 79-day period by entertainers like Stephan Grapelli, Taj Mahal, Arlo Guthrie and Donovan. Farr also plans a major dance series for the coming months, and some "off-the-wall" acts, including shows by Amsterdam's Need Company — "a combination of contemporary opera contemporary dance and avant-garde theatre" — and by Blooplips, a troupe of gay clowns from London, England.

"I'm not trying to do something for everyone," he says. "I'm just putting on what I think is excellent."

Bryan Mason, Dalhousie's vice-president (finance and administration), says the new director has had "an extraordinary impact" on the Canadian entertainment scene.

"He's dynamic, exciting and avant-garde. We expect his term to hail a new era in arts entertainment for this province."

Farr began his career in arts management in the 1960s as chairman of

special events for the University of British Columbia in Vancouver, the city in which he grew up.

During the next 22 years, 10 of them in New York City, he held various administrative jobs in theatre and dance. Among other things, he was associate director for Halifax's Neptune Theatre, co-produced John Gray's *Billy Bishop Goes to War* and helped launch the male ballet troupe the Trocaderos.

Most recently, he produced the Xerox

International Theatre at Expo '86, where he co-ordinated the shows of 54 nations.

Farr plans to put some of the contacts he made over the years to good use by luring first-rate acts from around the world to Halifax.

"I'm trying to bring some of the world's stage to Halifax," he says. "I've been working in that milieu for some time, and I think the community is ready for it." □ Photo, research by Jody Farrell.

# Zap! Here comes laser dentistry

*Dal researchers are at the leading edge of a breakthrough in dental care*

**D**r. Kenneth Zakariassen has good news for everybody with teeth:

Using techniques being perfected at Dal, dentists soon should be able to use lasers to zap some of the most vexing dental problems — repairing cracked and chipped crowns and sealing root canals — in a fraction of a second. Eventually, lasers may even help protect teeth from decay.

Zakariassen, dean of Dal's dental faculty, predicts crown repair will be the earliest breakthrough for his research team. "It will mean a great saving to patients in terms of both time and money," he says. "If you chip a crown, it can't predictably be fixed in the mouth. The crown usually has to be cut off and remade, which is a very expensive procedure. What we think we'll be able to do — experimentally, we're able to do this now — is to fuse porcelain back onto the chipped area with a laser, using exposures of one-tenth to two-tenths of a second."

Zakariassen introduced research on laser dentistry to Dal almost two years ago when he moved from the University of Alberta, where he was a professor and chairman of the division of endodontics. He also was instrumental in the birth at U of A of a CO<sub>2</sub> laser designed specifically for dentistry, with a hand-piece about the size of a pen.

At Dal, he's working with dentist Larry Peacocke, a part-time member of the dental faculty, and Derek Jones, assistant dean for research and chairman of biomaterials.

Zakariassen is hoping Dal will get its own dental laser once the bugs have been worked out of the Alberta prototype. For now, the Dal team borrows a medical laser from the Victoria General Hospital's department of obstetrics and gynecology one morning a week. That equipment isn't meant for use with a hand-piece, so the Dal researchers are working on a bench top with extracted teeth. This spring, however, Zakariassen expects to test a French-made laser built specifically for dentistry.

He believes that Dal's work on crown repair is unique. That's partly because one team member, Derek Jones, is a ceramics expert (he was to receive a major award in March from the

*Zakariassen introduced the research to Dal*

[Creagen photo]

International Association of Dental Researchers) who is trying to formulate the best kind of repair material. "By putting our expertise in lasers together with his in ceramics," Zakariassen says, "we are able to do things they can't do at other universities."

Zakariassen's earliest work with lasers was in his specialty, root-canal therapy. Endodontists now pack a root canal with a latex-based material to seal it off, so that micro-organisms can't get in and out of the canal. Zakariassen hopes dentists eventually will get a much better seal by plugging the end of the canal with ground-up tooth tissue that has been hit with less than a half-second of laser energy. The laser also would kill bacteria and vaporize remaining pulp tissue in the canal.

Zakariassen says he hopes Dal's laser researchers also will start working soon on preventive dentistry. Elsewhere, researchers are experimenting with laser beams to change the surface of tooth enamel to make it more resistant to decay. Dal's team has some ideas that may advance this research, Zakariassen says, but hasn't had a chance yet to try them out.

He says cavity-prevention may become one of the most

important applications of laser dentistry. And he predicts that dentists will be using lasers routinely within five years. The current cost of the equipment — about \$100,000 for a custom-built dental laser — might be a bit steep for the average dentist, but the price should drop significantly if the equipment is mass-produced.

Lasers already are being used in periodontal surgery, to vaporize excess tissue from diseased gums.

"That work is with soft tissues," Zakariassen says. "All the work we're doing is with hard tissues, and you need much more high-powered lasers for that. It's the technical problems we're working on now: if you're working with high-powered lasers, you don't want to damage tissue around (the target area). So it's the right type of laser, the right exposure parameters, the proper power levels, that kind of thing, and the formulation of the right porcelains that is important now. We're getting closer and closer." □

An aerial view of the campus in 1933

## Shades of Studley past

*If old Judge Croke could see Dal now, he'd be astonished. Who's Judge Croke? He's part of the fascinating history of a well trod 41 acres of land*

*By Jim Bennet*

**D**alhousians, tread softly on Studley's sacred sod. Actually, there's not a lot of that springy turf remaining among the asphalt and concrete of the Studley campus. And there's certainly as much of the profane in the historic soil as there is of the sacred. But one of the few things that Dal's diverse alumni can claim to have in common is having walked as a student in the square framed by South, Oxford and LeMarchant streets and Coburg Road.

It took a while for Dalhousie to get to Studley in the first place. There was the long and undistinguished period in her original home, an 1820 freestone building at the north end of Halifax's Grand Parade. Then, in 1887, after such benefactors as the Nova Scotia-born New York publisher George Munro had breathed life (and lucre) into the torpid little college, Dalhousie moved to the brand new Forrest campus between Robie and Carleton streets.

The city paid \$25,000 for the downtown site, which it coveted as a location for a new city hall, and threw in the new campus, part of the Halifax Commons, for free. A towered brick building was erected, of which sidewhiskered students, cavalierly ignoring the fact that Dalhousie had been co-educational since 1881, would sing, "Up with the Black and Gold, let them wave / High o'er the old red tower, / Forth from its portals have stepped in their might / This Dominion's men of power."

That campus and the red brick building took their name from Rev. John Forrest, the Dalhousie president who had engineered the move and drummed up most of the funds. Being George Munro's brother-in-law, he was quick to acknowledge, was something of a help.

By 1911, Dalhousie was ready to spill over to her new home at Studley. Those 41 acres have been trod by every student since — even by those who, like myself, stayed only long enough to

Driveway leading to Murray Homestead. Chemistry Building is on the left

learn that cards and carousing were incompatible with passing grades.

Degree or no degree, we all did some time within that old wall of ironstone that still surrounds the central campus.

Whence the wall and whence the name?

That's where the profane part comes in.

Judge Alexander Croke was not a pleasant man. Brilliant, yes; but bigoted and spiteful, too. Avarice and influence brought him from England to Halifax in 1801 to preside over the Court of Vice-Admiralty, which dealt (among other important things) with the spoils of war in a naval era when privateer prizes were a growth industry. Croke's prejudice against Catholics was legend, and his judicial position lofty enough to exercise it. When King's College was founded at Windsor, N.S., during his tenure, he succeeded in pushing through a charter barring all but sworn Anglicans from attending (despite the more liberal advice of Church of England leaders). He had a seat on the self-serving, graft-ridden legislative council that passed for a government in those benighted times. But nobody, high station or low, Anglican, Catholic or Dissenter, was exempt from Croke's official scorn or personal slander — always expressed with enough wit to guarantee it wide circulation.

Judge Croke's sense of business was as sharp as his wit. He loved to pull off a deal, and one of his more inspired acquisitions was the rolling tract of fields and pinewoods overlooking the Northwest Arm that became his estate. He named it after his home in Oxfordshire: Studley.

As a release from the drudgery of

processing spoils from the Napoleonic Wars, the Judge repaired to the glades and bowers of his land and indulged his favourite passion — writing scurrilous verse about Halifax society. Croke's poems were stuffed with thinly disguised references to everybody who was anybody, from his fellow council members to the distinguished Charles Inglis, Bishop of Nova Scotia. Even the approaches to his own sylvan venue were not exempt from the Judge's venomous couplets. In one poem, between libellous jabs at his peers, he wrote:

*"As drizly vapours, up Chebucto bay,  
From banks of cod fish, wind their  
creeping way;  
Each narrow chink, the piercing fog  
pervades;  
And flannel scarcely guards the Shivering  
Maids."*

After 14 years on the Admiralty bench at a minimum of £4,000 per annum, Croke retired to the original Studley and a knighthood, leaving the well groomed suburban spread to be disposed of by the real-estate agents. They advertised a long list of features and modern conveniences, including a drawing room, study and sitting room, four bedrooms, garret, kitchen, wash house, butler's pantry, dairy, larder, beer cellar, root house, wine cellar and a cistern good for 1,200 gallons of rainwater.

Mathew Richardson, a Halifax merchant, snapped up the property and luxuriated for 16 years among the fruit trees, lawns and gardens. Then a chimney fire brought the whole magnificence down in a shower of sparks.

Studley Mk II (Mk III counting Oxfordshire) rose from the ashes under Richardson's guidance. He settled in

for another 29 years of creature comforts, and in 1860 died at age 90. Good wife Louisa lived until Confederation year, and at her demise Studley went on the block once more.

This time the purchaser was the fragile Antoinette Nordbeck, spinster daughter of a famed Halifax silversmith who had dealt, until his death, in everything from fine gold, jewelry, fancy goods, cottage and square pianofortes to sheet music and fishing gear — leaving Antoinette well fixed, if sickly.

Not one to languish lonely, she offered to share her home with as respectable a couple as might be found this side of Jordan's tide. Rev. Robert Murray, editor of *The Presbyterian Witness* and author of well known hymns, including "From Ocean Unto Ocean," moved in with his wife, Elizabeth; the pair became companions and comforters to the jeweller's daughter. If anyone could lay the ghost of old Judge Croke and the echoes of his nasty stanzas, Murray could. He and Elizabeth ministered to the spiritual and social needs of Miss Nordbeck until her death in 1898, when she bequeathed Studley, lock, stock and stone wall, to the Murrays.

Now we're getting to the Studley of living memory: many a Haligonian still remembers that aging and comfortably shabby edifice as the Murray Homestead. It kept the name even after the widowed Elizabeth sold the Studley property to Dalhousie in 1912, perhaps in token of her late husband's position as a governor of Dalhousie and great friend of President Forrest. The selling price, \$50,000, was a fair pocketful at the time, but nobody (least of all the Murray children, who might otherwise have fallen heir) really thought it was sufficient return for what was probably the most attractive parcel of undeveloped land remaining in the South End of Halifax.

Judge Croke's wide carriage drive, flanked by stately oaks and willows, still swept down from the gateway near the corner of Coburg and LeMarchant, and a little brook lazed along at its foot. The Studley Quoit Club occupied an acre or so on the South Street side, where white-trousered gentlemen set up marquee tents on Saturdays to hurl bronze rings at whitewashed stakes and tippie squadron punch. The rest was tall pines, shrubby paths and broad fields. Not bad for the \$50,000 — in fact it was an even better deal than Dalhousie had made in the move from the Grand Parade to the Forrest campus.

By 1913, the architects were at work, and within a year or two the walls of the Science Building and the MacDonald Library began to rise around the neat

little quad. As the 1920s turned, so did more and more Studley sod. Sidewalks, some donated by graduating classes, began to cover the grassy paths. The Law Building (used for many years as a temporary Arts Building and now the University Club) took its place across from the library. Shirreff Hall was built with money from the Eddy Match fortune.

Also during the decade, the University of King's College, burned out of its Windsor building, left temporary digs in the Birchdale Hotel near the foot of Coburg Road and came to occupy a corner of the land. The Public Archives of Nova Scotia likewise acquired a Studley lot on which to build. The foundation of a gymnasium was laid across from the Science Building, and a protem wooden superstructure lasted a few years until a bunch of the boys from the Class of 1931 (so, at least the accepted rumor had it) got full of bootleg gin and burned it to the ground, probably with one of the matches that funded Shirreff Hall. Perhaps they accompanied the act with some lines from a Dalhousie beer-drinking song of their day: "Life slips its tether, / When good fellows get together, / And we're game for any mischief, / In the fellowship of spring."

The foundation never really came to much. It was tarred and gravelled over as it sat out the 1930s, and an entirely new gymnasium was built a few yards away — the only real change in the campus during the decade before the Second World War. During the war another "temporary" wooden building was built on the site of the 1931 bonfire as classroom space for officers' train-

Forrest engineered move from downtown

Gymnasium at left burned down in 1931. At right are the Macdonald Library and the Chemistry Building

ing. In the 1950s, it saw service as men's residence (and as the site of the Common Room where sundry wastrels, myself included, scuttled their formal education in a daily round of bridge, hearts, whist, poker and nines). Today the flaking edifice, only architectural legacy of the Dalhousie of the 1940s, dares call itself the Education Building.

The postwar years saw the last remaining relics of Old Judge Croke fall to the axe and the hammer. In 1946, the trees along the carriageway were cut down. In 1949, the Murray Homestead was razed to make way for the new Arts & Administration Building. The brook was filled in. A rink was built in the southeast corner. It burned down (although this time not by design) and another took its place. An east wing on Shirreff Hall encroached on the Studley quoit beds. The Life Sciences Building rose where the last of the pinewoods had stood. The Dunn Building covered a third of the north meadow; a parking lot and Howe Hall the rest. The National Research Council got a site along Oxford Street; the Kipling Collection required a wing on the old MacDonal Library and then the new Killam Library put it in the shade.

Before the 1970s ended, Studley was full.

Meanwhile, Dalhousie expanded up University Avenue and across South Street, and doubled back onto the Forrest campus. Subscriptions funded a Student Union Building where the temptations went beyond dog-eared cards to snooker tables and a bar. More construction took place: The Arts Centre. The high white tower of the Tupper Medical Building. The Weldon Library

for law students. For athletes, the gleaming Dalplex complete with olympic pool and courts for playing every game known to ball and racquet.

Dalhousie has become what would have beggared Alexander Croke's mean-spirited imagination, boggled the Mathew Richardson brain, sent Miss Nordbeck tottering for the smelling salts.

There are still a few pines near Shirreff Hall that must have whispered in the ears of all those erstwhile proprietors of Studley; a patch of lawn at the southwest corner of the old property that probably felt their footsteps.

Even if one were to put any credence in such things as shades of jurists past, it would be hard to say whether the Judge would choose to haunt the Studley of his birth and death, or the site of his new-world sojourn.

If, indeed, he does choose to lurk by night on the site where he once walked and whetted his wit for new and malignant lines of verse, he might be applying to his own visitation the lines he wrote of the Devil's visit to Halifax in 1806:

*Unseen, unheard, he took his silent round,  
Whilst all the world in leaden Sleep was drown'd;  
Nor doors, nor walls, his secret course impede,  
Through all he travels with an Angels speed;  
And in each slumbering ear, as on he past,  
He gently breath'd a Pestilential blast.*

Thinking back, I believe he must have breath'd on a few of my math papers. □

# She's singing all the way to the bar

*Some people think Cape Bretoner Raylene Rankin [LLB '87] could make it big in the music business. Lately, though, she's been kind of busy*

Last June, Raylene Rankin put in a day's work at a Truro, N.S., law firm, drove 100 kilometres to Halifax and rushed to the city's Metro Centre to sing for Prince Edward.

It was, she recalls, "a very horrible evening."

She hadn't had time to rehearse either of her two songs, "Cape Breton Lullaby" and "Rise Again," with her brother, John Morris Rankin, who was accompanying her on the piano. She hadn't had time to change into something suitable for entertaining royalty, so she was carrying a dress in a bag. She hadn't obtained a security pass. And, with showtime approaching too fast, she couldn't persuade security officials to let her into the building where the prince was attending a dinner and concert.

"Do you know how big that centre is?" she asks.

"I ran around it about five times looking for the right entrance."

Rankin finally did get to sing for the prince, but the story is an object lesson on one of the perils of trying to juggle two demanding jobs, which she occasionally tries to do.

And her review of her performance ("I don't think Prince Edward really liked it") is a typically modest assessment from this five-foot Cape Bretoner with the powerful voice.

At age 27, Rankin (LLB'87) is in her final few months as an articling clerk with the Truro law firm Burchell, MacDougall and Gruchy.

And, from the time that she was growing up, she's had an off-and-on career as a singer. She has a clear, precise soprano, which can glide from childlike sweetness to gut-wrenching intensity. It has been known to move listeners to tears.

Denis Ryan, a Halifax folksinger-turned-stockbroker, has followed her musical development since she was a schoolgirl in Mabou, singing at concerts and kitchen parties with her family. "I think she has a special gift," he says. "When she sings that Gaelic style, it's so perfect, so true, so real. And the size of her! When she puts her guts into a song, it's incredible."

Janet Munson, a Halifax fiddler and music teacher who grew

[Photo by Michael Creagen]

up in Scotland, heard Rankin at the Lunenburg Folk Festival last summer and decided she was "one of the three best female vocalists I've ever heard."

Kenzie MacNeil, the Sydney singer and songwriter who originated and produced the Rise and Follies of Cape Breton revues that began in the 1970s, says he has no doubt that Rankin is star material.

"I've often thought that 80 per cent of talent is raw, gut passion, and the rest is refinement," he says. "She has that 80 per cent, and over the years she's been getting the rest of the 20 per cent."

Her other attributes, MacNeil says, include perfect pitch, a deep commitment to the integrity of her material and a total lack of vanity as a performer. "I just hope she doesn't turn away from (the music) now that she's about to become a lawyer."

At the moment, it is the legal career that is demanding most of her attention.

On a mild Saturday in January, she's in her employer's library, doing research for a memo. In her bright pink corduroy pants and Lunenburg Folk Festival sweatshirt, she looks like a teenager. But she also looks tired. A dozen thick law books are stacked on her desk. Her previous work day didn't end until 2 a.m.; she'll end up working here all weekend.

She is a little surprised by the extent to which law school and her current job have taken over her life. She doesn't have much time or energy for music these days — even for keeping her voice in shape when she's alone in her apartment.

There was lots of music in the house in which Rankin grew up on the west end of Cape Breton Island. Her father, Alex J. (Buddy) Rankin, a heavy-duty mechanic who died in 1981, played the fiddle. Her mother, Kathleen Rankin, had some training on the piano. Most of their 12 children can sing, and about half play at least one instrument.

"I was always the one delegated to sing," says Raylene, one of seven girls in the family. "It's weird because I think all the girls in our family have equally good voices. I've done a lot more singing in public, so maybe that's why people know of me more

than them."

For years, the family didn't own a record player, and the TV didn't always work, so the kids learned about music mostly from kitchen parties and school choirs. Their first public performance as a group was at a concert in Whycomagh. A couple of years later, Raylene, at age 11, made her solo debut at an outdoor concert in Mabou. In high school, she learned to sing in Gaelic.

The summer of 1980, after her first year at St. Francis Xavier University, where she eventually got a BA in English, Rankin joined the cast of the Rise and Follies show in Sydney.

It was Kenzie MacNeil who recruited her. He had heard her voice on the soundtrack of an National Film Board film made by his father-in-law. "When I heard her," MacNeil says, "I couldn't believe her."

She did two more seasons with the Rise and Follies show; the last, in 1985, toured Cape Breton, went to Halifax and spawned three CBC half-hour shows and the fourth record album on which Rankin sings. That exposure led to a spot last year on the closing of the Canada Games in Sydney and at the opening of the cultural festival at-

*Brother John Morris is also musical*

tached to the Games. The fourth album, by the Rise and Follies cast, contains "Rise Again," the passionate, anthem-like song on which Rankin has put her stamp.

Meanwhile, she was also getting on with the other side of her life. After St. FX, she took two years off and went to work in a hotel in Alberta, where she

sang part-time in a country band. Then she enrolled in law school at Dal.

In typical Scottish fashion, Raylene's parents had impressed on their children the virtues of higher education. The children paid attention: Nine of the 12 went to university, and the others have technical or vocational training.

Raylene says she never considered becoming a full-time musician. "I'm too practical-minded. I'm always thinking about how I'm going to make a living, and I always have. Music was always a sideline with us, even when we were growing up and singing as a family group. We were doing it because it was a way of earning spending money, but we've always been busy doing other things, too."

Still, she's not sure she wants to devote the rest of her life to law, "mainly because this is a very time-consuming, energy-sapping way to earn a living."

At the very least, she'd like to record an album with her family.

"I'd like to think I could go away from (law) for a while and come back to it. But I know I'm going to have to make a decision soon to do one thing or the other." □

## The way we were in '59: packaging the hour-glass look

In an age of psychological advertising, which has succeeded in introducing us to the point where we buy cars we cannot afford, and go to the dentist because we believe the lies about "painless" drills, it surprises us that the females around Dal are so slow to adopt the advertiser's methods.

Assuming (and without much danger of serious contradiction) that the average girl's primary aim in life is to find a male to support her, it would seem that modern selling habits contain some valuable pointers which they might use to advantage.

In actual fact, her sales problem is much simpler. For example, they're selling spark plugs these days with ads consisting of one-tenth spark plug and nine-tenths attractive female. The spark "pluggers" have to worry about transferring the consumer's interest from the model to the spark plug. But our girls only have to make sure that their prospects' interests are not transferred at all.

And what is one of the advertiser's main gimmicks? Why, attractive packaging, of course; packaging skillfully designed to accentuate the virtues, and hide the defects, of his product.

Which brings us to the Spark Plug Queen, which brings us to her interesting packaging, which brings us to clothes, and the crux of this editorial. For the virtues of Dal's girls are truly many, their defects amazingly few, and we are dismayed and saddened that the packaging they employ does so little to reveal their true nature.

How about it? What happened to high-heeled shoes, broad belts, nylons, fitted skirts, plain cotton blouses, tastefully chosen sweaters, and coats that were designed for use south of the Arctic Circle?

The idea of showing an hour-glass figure seems to have gone out with the coming of the watch, and we haven't seen the end of flats and wool socks since Dr. Ballard's "Cure for Flat Feet."

The common feminine apparel around

the campus seems to be intended to make Dal the "Down-and-Outs Home for Lumber-Jacks."

And, (believe it or not) our motives are nothing but noble. We are concerned in our hearts only with the welfare of women, the happiness of men, the promotion of a Canadian reputation for good taste in culture and art, and the end of frustration and deception for all.

We admire thee mightily,  
Girls of Dalhousie,  
But our passion is tempered  
And our sight is sore.  
Our desires are simple,  
(Though perhaps you'll say "base")  
So why not present us  
With a quick "about-face,"  
And wear some nice clothes  
To please us with grace? □

*From an editorial in the Dalhousie Gazette,  
Feb. 25, 1959.*

# Ballot 1988

Dalhousie Alumni Association Election of members to:

The Board of Governors of the University.

The Board of Directors of the Association.

Following are brief pen pictures of the candidates in this year's election.

Read them carefully, then mark your ballot below and return it to the Alumni Office not later than April 30, 1988.

### BOARD OF GOVERNORS

**N. Robert Anderson, LLB '57**, Judge, County Court District No. 1, Nova Scotia, since 1971; read law with A.W. Cameron, QC; called to Bar of Nova Scotia in '57. In law practice Sherbrooke, Nova Scotia '57-'67. Appointed Director (Criminal) Department of Attorney General, Nova Scotia, Halifax, 1965. Member of Nova Scotia Barristers Society; member, Canadian Bar Association; member, County Court Judge's Association; member, Canadian Judge's Conference. Leisure activities include fishing, hunting, camping, reading. Currently serving two-year term, Alumni Board of Directors; chair, Quality of Student Life Committee.

**H. Larry Doane, BCom '53**. Currently is the Chairman of the Management Committee of Doane Raymond and senior tax partner in the firm. But **EVERYONE** is welcome,  
so c'mon back to Dal  
for reunion weekend!

Among those attending a reception for alumni volunteers recently were, from left, Dr. Frank Lovely, Dr. Elaine Gordon, Dr. Don Cunningham, associate dean of dentistry for alumni relations and continuing education, and Kate MacDonald, co-ordinator of alumni relations and continuing education for the faculty of dentistry [Carlos photo]

Joan Walker, right, a member of the Alumni Association board, chats with first-year students at a recent reception for winners of Dal entrance scholarships [Carlos photo]

## Students display Victorian gowns

When models for the Alumni Association women's division's third annual fashion show walk down the runway in April, many will be wearing outfits that haven't been in style since their great-grandmothers were young.

The models — and the old-fashioned fashions — are from Dal's costume studies department.

Since February, 26 students have spent most of their class time designing, cutting and sewing Victorian and modern ball gowns for the show. Students will also design and sew the corsets, crinolines, bustles and petticoats that go under the period gowns. Lynn Sorge, head of wardrobe for

Dal's theatre department, says students base their designs on photos and illustrations from old editions of magazines like *Harper's Bazaar* and *The Illustrated London News*.

Most of the first-year students, she says, can't sew or make patterns when they begin the two-to-three-year costume studies course. "In four months, they're able to look at a sketch and reproduce an outfit from the underwear out. I think it's incredible."

The costume studies department traditionally has held small fashion shows in the spring to display students' work for family and friends.

Three years ago, the Alumni Association's women's division invited the department to collaborate in a much larger, more elaborate production in the Student Union Building. Money raised from the show goes towards the university's scholarship fund. □

## Dickson will speak at alumni dinner

Brian Dickson, Chief Justice of Canada, will be guest speaker at the Alumni Association's annual dinner meeting in Halifax May 14.

Chief Justice Dickson, PC, K St.J., LLB, LL.D., DCnL, is a native of Yorktown, Sask. He graduated from Manitoba Law School in 1938, was called to the Bar of Manitoba two years later, and practised law and taught at the Manitoba Law School.

He was appointed to the Court of Queen's bench of Manitoba in 1963, to the Manitoba Court of Appeal in 1967 and to the Supreme Court of Canada in 1973. He was named Chief Justice in 1984.

For further information about the dinner meeting, contact the Alumni Office. □

## Dental hygienists mark anniversary

Graduates of the School of Dental Hygiene will gather in Halifax June 23 to 26 to celebrate the school's 25th anniversary.

Highlights of the program include talks by Michele Darby and Dr. Brad McRae, class reunions, a harbor cruise and a Sunday brunch with Gen. John Cabot Trail as guest speaker. □

## Reflections on "year of restraint"

By Ian Palmetter [BA '50, LLB '53]

In May of 1987 I took over as president of your association and here it is 10 months later. How the time has flown! In May of this year a new president will take office and I will have time to reflect on all that the past year has brought forth.

I suppose the best way to describe it would be the "year of restraint." Because of severe financial burdens on the university, all departments, faculties and organizations were required to take a 4.5 per cent cut in budget over the budget in force for the 1986-87 year. This included the Alumni Association. Accordingly it was necessary to cut some \$9,000 from our Association program budget.

After considerable soul-searching your executive was of the opinion that the only way to effect such reduction was to cancel all branch meetings for the 1987-88 year. This has been done and it is with regret that we will be

unable to have annual branch meetings this year in such traditional locations as Ottawa, Toronto and Montreal. We hope we will see you all in those centres next year.

Dr. Clark has recognized this problem and the administration has come up with a proposal for partially funding alumni programs which is tied in to the Annual Fund Campaign. As you know, alumni members are not only the volunteers involved in this campaign but are also the primary donors to it. The Alumni Association will now receive a percentage of the Annual Fund givings to be used for our program. We are all very excited about this proposal and know the more successful the Annual Fund the more funds will be available to us. While I am mentioning the Annual Fund, I want to pay a special tribute to Dr. Donna Curry, one of our members and a past Alumni president, for the superb job she did in chair-

ing the 1987 Campaign. From all reports it was an outstanding success. Well done, Donna.

On a more sombre note, I wish to announce the resignation of our director of alumni affairs, Heather Sutherland. Heather does not leave Dalhousie, but is really being promoted to take on the very important job as director of housing and conferences for the university. This is a newly created, most responsible position and we all congratulate Heather on her appointment and wish her every success.

Heather has been our director for the past five years. She is a person of exceptional energy and ability and has in my opinion almost singlehandedly revitalized our association. We are going to miss her and we must now get on with the job to find a replacement. One saving grace is that Heather will be here at the university and will continue in a supervisory capacity until a new director is employed. On behalf of the executive and all alumni, I wish to take this opportunity to thank Heather most sincerely for her work and friendship over the past years.

I cannot end this message without making some reference to this year's reunion, which takes place on May 13 and 14. This year the classes of 1928, 1933, 1938, 1943, 1948, 1953, 1958, 1963, 1968, 1973, and 1978 will be honored but all alumni are urged to attend. I cannot believe that this year marks the 35th anniversary of my own graduation from that very famous (?) law class of 1953.

At our annual dinner on May 14, we will have as our guest speaker, Hon. Brian Dickson, the Chief Justice of Canada. Chief Justice Dickson has always been interested in Dalhousie and a few years ago was the recipient of an honorary degree from the university.

I hope all of you will give consideration to attending the reunion this year, to see the changes on the campus and to renew old friendships.

Hope to see you there. □

### What do Secretaries, Industrial Workers and Executives have in common?

Nothing.

Well, not usually, but the common factor that brings these varied fields together is Drake.

At Drake, we understand different people have different needs. We're more than just one of the world's largest, most successful personnel systems companies. We're actually a whole range of services providing specialists in each field.

On a temporary, part-time or permanent basis. Whatever your business needs, we can help.

Drake Personnel, Drake Office Overload, Drake Industrial and Drake Executive -- working together to give you a better service.

**DRAKE**

1809 Barrington Street, Suite 504, Halifax

429-2490/429-2400

## Nursing grads hold reunion

Dalhousie outpost nursing graduates will hold a reunion in Halifax July 21 to 23.

For further information, contact Pauline Wilson, 25 Sevenoaks Ave., Brockville, Ont., K6V 2V1 □

## Smillie joins Alumni staff

Andrea Smillie, recently appointed assistant to the director of Alumni Affairs, is a native of the Halifax area with many ties to the Dalhousie community. After graduating from Dartmouth High, she attended York University, and graduated with a specialized honors degree in fine arts. For the next five years, she worked in student programs administration at York University while also running an editing business and pursuing part-time studies in humanities. Both her parents and one sister are Dal alumni, and her mother teaches at Dal. □

## Lectures slated

The ethics of investigative reporting, medical treatment of the critically ill and business entrepreneurship will be among topics explored at Kaleidoscope, the eighth annual lecture series at the University of Western Ontario April 9.

For registration information, write to:

Helen Luckman, special programs co-ordinator, Department of Alumni Affairs, Room 11, Alumni Hall, University of Western Ontario, London, Ont. N6A 5B9. □

## Librarians meet

The School of Library and Information Studies Associated Alumni will hold their annual general meeting in Halifax June 19 at 3:15 p.m.

The meeting will take place at the site of the Canadian Library Association conference. A reception will follow at 5:30 p.m. □

## Furniture needed

Do you have spare furniture you'd like to donate to Dal student residences? If so, please contact the SUB housing office at 424-3365.

# "Expect the Best from Woodcraft!"

*John R Brown, President, Woodcraft Manufacturing Limited*

Since building our first piece of solid wood furniture nearly 14 years ago, Woodcraft has strived to maintain the highest standards of quality, craftsmanship, customer value and total satisfaction.

We have lived up to our customers' expectations. And our own. We've watched the competition and we know our handcrafted furniture is the best.

Check ours against theirs and you'll see why:

### The Products

- Traditional and contemporary
- Designed and built locally
- Solid kiln-dried wood used throughout
- Full two-year guarantee
- Exclusive Lamello construction and joining system
- Oak, teak, mahogany and other specialty woods
- Exclusive no-mar finish
- Custom stain and color matching
- Quality controlled manufacturing
- Custom interior contracting

### The People

- Knowledgeable sales staff
- Trained Nova Scotia craftsmen

**Vesta (Adamson) Mason**, BSc(Pharm)'82, and **Kevin**, Cranbrook, B.C., on Oct. 15, 1987, a son, John Andrew, a brother for Adam.

# Visit your Audi dealer and take a test stop.

(ABS anti-lock brake system is standard  
on the new Audi 90.)

The precision with which  
the new Audi 90 drives is  
rivalled only by the precision  
with which it stops.

It owes this impressive  
stopping power to an ingenious  
ABS anti-lock braking system.  
Electronic sensors pump the  
brakes up to 10 times a second  
allowing you to stop in the  
shortest distance possible while  
still retaining steering control.

Isn't that a comfort to know?

The 90 is amazingly safe in  
other ways too. The front seat  
belts, for example, are equipped  
with automatic tensioning re-  
tractors for a new standard  
in safety.

Our industry-leading Audi  
Card is also standard on the 90.  
It's the ultimate expression of  
confidence because it covers  
virtually all maintenance and  
repairs for 3 years.

Which is all the more  
reason to stop in at your Audi  
dealer as soon as possible.

Advancing the art  
of engineering.

We await your stopping spree.

# A Message From Halifax's Most Elegant Hotel. Hand delivered.

There is nothing more regal than the service we offer. Unless, perhaps, you consider the refined atmosphere and subtle elegance of our rooms.

Note the dignified writing desk, mahogany furniture, brass reading lamps above the bed, and dressing table complete with hair dryer.

To make life easier, there are two telephones, remote control television and minibar in each of our 200 rooms and suites. We even hand deliver your messages.

Such attention to detail sets a new standard, and sets the Prince George apart. To reserve, call: 1-800-565-1567, or (902) 425-1986.

*Aeroplan members earn 1,000 bonus points with every stay.*

## THE PRINCE GEORGE HOTEL

It's free now.  
But wait a year.

The Walwyn RRSP tape, like any good advice, is worthless unless you act on it.

The Walwyn RRSP tape comes free and contains clear and expert advice on a matter that should be kept top of mind when you're planning RRSP strategy: the times to come.

Right now there's a classic market opportunity. It always happens after a market correction. The value has always been the best at these times. The opportunity never lasts long because markets inevitably have risen in value. And inevitably, only successful investors know and act on this.

The Walwyn RRSP tape tells you exactly what you can do about this RRSP opportunity. It's the work of market veterans, many of them top producers with 20 or more years of experience through ups and downs.

This easily understood and fully reasoned RRSP tape is free as soon as you respond by coupon or telephone.

The only obligation you have is to your future.

Send me something worth acting on. The Walwyn RRSP tape.

# We've got your memories

Red ivy on the A&A, exams in the gym, Friday night dances, orientation, dry silence in the library, convocation. Whether your year is '57 or '87, there are some Dal memories that don't change. Bring them all home again with authentic Dalhousie memorabilia — crested items from ties to tankards, books to bookends, pens to plaques — all available at your University Bookstore.

Call, write or drop in to browse!

*Much more than a textbook store!*

# THE *worldly* CANADIAN

It is a fact that we Canadians are born travellers. It is equally true that, as one of these worldly Canadians, we fly to more places in this country than any other airline. What's more, we are the only Canadian airline to serve five continents — North America, South America, Europe, Asia and Australia. We even serve the South Pacific.

In fact, when all is said and done, it comes down to this. Every day, somewhere in the world, there is a Canadian leading the way. A spirited, worldly Canadian.

When you want the true Canadian spirit, call your Travel Agent or Canadian Airlines International.

*The spirit takes wing.*
