Dalhousie seems to be in an introspective mood this year, and you'll find that reflected in this issue of the *Alumni Magazine*.

The cover story, for instance, features a long and wide-ranging interview with Dr. Howard Clark, who has just ended his first year as president of the university. In conversation with Dal public relations director Marilyn MacDonald, Dr. Clark touches on issues ranging from alumni relations to funding problems. More important, he shares some of his hopes for the university's future, especially in the area of undergraduate education. What the university must do, Dr. Clark says, is decide what its fundamental educational objectives really are. "Are we training, are we educating, are we doing both? What's the balance we're trying to achieve; how well are we achieving it? To what extent are we willing to measure the progress we're making in achieving those objectives?"

As the story on page three explains, those questions will be addressed next spring, when Dal holds a major symposium on undergraduate education. The symposium will be part of the first phase of Dr. Clark's five-year plan to improve the lot of the undergrad. Alumni are, of course, invited to attend.

You are also invited to take part immediately in Dal's self-examination. On page seven, you'll find a questionnaire that asks for your impressions of undergraduate life. What are your good and bad memories? What would you change at Dal if you were in charge?

If you've always wanted to tell Dalhousie what you think of it, here's your chance.

Marian Bruce

A little radio station grows up

CKDU, Dalhousie's rapidly expanding radio station, wants an even bigger share of the listening audience. Stay tuned

By Craig Benjamin

Some sages no doubt shook their heads when CKDU, the Dalhousie campus radio station, began FM broadcasting in the spring of 1985. After all, what could a student radio club possibly know about community broadcasting?

Quite a lot, it seems. In two and a half years, CKDU has become one of the largest campus-based stations in Canada. It has increased its full-time staff to nine from two and more than doubled its annual budget to \$200,000, about half of which comes from Dal students and half from advertising sales, government grants and donations from the public.

In the next year, CKDU administrators hope to increase the station's broadcast power to 3,000 watts from its current 50 watts to extend its range beyond Halifax and Dartmouth to nearby towns like Bedford and Sackville.

"Campus radio stations are maturing," CKDU station manager Mark

MacLeod says. "They're becoming much more professional, not in the sense of moving toward the standard of commercial radio, but in the sense of just being very well organized, knowing exactly what they want to do and being able to communicate better. Across Canada, it's a growing thing and CKDU is right at the front of that growth."

Part of the reason for CKDU's success is its unusual sound. When it began broadcasting on 97.5 FM, the station filled most of its 24-hour day with little-played forms of rock music such as punk, hard-core and "new" music. That remains the basis of programming, but an average program day now also can include two to four hours of jazz and blues, a hard-core, classical or other specialty show, about a dozen hours of programs that sample every field of music, and four hours of news, current affairs and programs prepared

by community groups.

CKDU doesn't have the mass appeal most stations aim for, but it has carved out a niche for itself in the Halifax-Dartmouth area. The station has never paid for a listener survey. But staff and volunteers believe — on the basis of such evidence as phone calls and response to the annual spring fundraising drive, which last year raised \$15,000 — that CKDU is particularly popular with high school and college students and people in the arts.

"I think there's always a certain percentage on the normal curve who are interested in the underculture, who are interested in blues, who are interested in jazz, who aren't just interested in whatever the pop thing is," MacLeod says. "I think we'll always appeal to those people."

But what the listeners hear is only half the story. Behind the scenes are about 200 volunteers and staff — students and non-students — who produce shows at the CKDU studio in the Student Union Building, act as program hosts and do administrative and technical work. It's not uncommon to see a volunteer or staff member arrive at the station early in the morning and leave late in the evening.

MacLeod says: "They do their eight hours a day, and then the hobby starts, and after the hobby stops, I don't know, the sado-masochism starts. More than it just being a job, they get a lot of pleasure out of what they do here."

MacLeod says the steady expansion of staff in the past year — to the point where CKDU has the largest full-time executive of any campus/community station in Canada — gives CKDU the luxury of planning long-term projects. They include promotion campaigns and preparations for a national conference of campus stations in Halifax next summer.

CKDU public relations director John Stevenson says most campus stations are too busy worrying about day-to-day problems to think much about long-term projects.

"It's going to be a while before we do some of those things, but we feel good because we're actually working on them, and other stations just worry about whether the student union is going to shut them down or whether they're going to have enough programmers so they won't have to shut down over the summer." □

MacLeod: for volunteers and paid staff, CKDU is not just a job (Benjamin photo)

The undergrad gets a boost

Next March, Dalhousie faculty, staff, students and alumni will get together for three days to talk about the undergraduate experience at Dal — what it's like now, and how it can be improved.

The symposium will be a key part of President Howard Clark's five-year plan to provide undergraduate education at Dal equal to or better than that at any university in Canada.

"Undergraduate education and the support and strengthening of it are matters of high priority at Dalhousie," Clark told students at the orientation convocation in September.

"Its further improvement will be our major objective over the next five years."

The symposium will help clarify the nature, expectations and experience of undergraduates at Dalhousie, Clark said. It also will help the university develop a clearer idea of the skills, knowledge and experiences that should be passed on to all undergraduates, and to determine how Dalhousie can best promote these educational outcomes.

"The symposium should not be regarded as an end in itself, but as the beginning of a continuing process," Clark said. "It should both elucidate our educational objectives and produce specific recommendations for the improvement of our undergraduate programs and the surrounding learning environment."

Clark said Dalhousie's concern about the quality and coherence of undergraduate education is shared by many other North American universities.

One indicator of the need for concern at Dal, he said, is the fact that four of every 10 students who begin undergraduate programs at the university withdraw before their third year.

"Although the causes of attrition are complex, the most recent academic plan of the faculty of arts and science identifies a number of areas of dissatisfaction with the first-year teaching program and attributes some student attrition to problems of inadequate facilities and/or teaching in that year. The latest academic plans of other undergraduate faculties also point to the need for improvements."

Clark said the university administration already has committed additional resources to help upgrade undergraduate education. Classrooms, teaching materials, computers and instructional equipment will be improved; undergraduate scholarships will be enhanced; the purchasing power of the library's acquisition budget will be maintained; and academic advising programs will

be strengthened.

In addition, administrative changes will take place to improve the learning environment and better co-ordinate student services, Clark said.

Clark said shifting the focus onto the undergraduate level does not mean that the university's postgraduate and research programs must be neglected. □

PUTTING TECHNOLOGY TO WORK

Now, it's easier than ever to take your computer with you, if it's the Zenith Z-183. Weighing less than 12 pounds, this revolutionary laptop computer features large capacity 3½" drives, an illuminated screen and is IBM PC/XT compatible.

Call Today For Special Offer on the Eazy-PC

The desktop Z-159 is so complete, that it has been chosen by hundreds of leading corporations and universities throughout the country. It's 60% faster than most competing models because of 8 Mhz switchable clock . . . with standard 512K RAM (without expansion card) and expandable up to 640K. And the portable Z-183 PC is designed so you can carry it with you anywhere. Perfect when you need a lot of computer power to go. Whatever your choice, the Zenith Z-100 PC's are the "Total Performance" solution to all your personal and business computing needs!

The case of the giant clams

*How can communities of shellfish survive 4,000 metres under the sea?
Dal oceanographer Larry Mayer is part of an international group of
scientists trying to solve that mystery*

Photos by Michael Creagen

Larry Mayer has more than a nodding acquaintance with the bottom of the sea, so he knew what to expect last year when he crawled into a mini-submarine for a 4,000-metre dive near the Grand Banks of Newfoundland:

At the end of a dark, cold, two-hour journey, the submersible would land on the ocean floor, at a depth where the temperature is just above freezing, where it is as dark as a coal mine, and where few animals and no plants can survive.

But the ocean had some surprises in store for Mayer, a Dal oceanographer, and the rest of the crew.

In an area with a limited conventional food source, the team found whole communities of snails, crabs, tubeworms and 15-centimetre-wide clams.

That discovery — the sort of happy accident that can lie in wait for a scientist who's also part explorer, adventurer and detective — has intrigued scientists here and abroad and given rise to a lot of unanswered questions, some of which could have implications for the oil industry.

To find answers to some of those questions, Mayer hopes to go back to the site next summer with scientists from France, the

United States and, possibly, Japan, in the French submersible *Nautile*, now being used in a salvage operation at the wreck of the *Titanic*.

"We discovered (the shellfish) totally by accident, and we were not prepared in terms of the sampling or in the follow-up studies to do a proper job," Mayer says.

"Serendipity plays an important role in science, but sometimes it's very frustrating because you're not very well prepared."

Sometimes it's even harder to be prepared when your laboratory is the bottom of the ocean.

Mayer, 35, a cheerful ex-New Yorker who has worked diligently — and mostly successfully — in recent years to get rid of his Bronx accent, is a geologist/geophysicist who obtained his doctorate from the Scripps Institute of Oceanography. He came to Dal in 1982 after doing research at the University of Rhode Island, where he also did his undergraduate work.

At Dal, he's an associate professor of oceanography. But he spends about a third of his time in a quite different role — chairman of an advisory panel for the Ocean Drilling Program,

UP FRONT ON CAMPUS

a \$40-million-a-year project in which the world's most sophisticated drilling vessel does scientific drilling in largely unexplored areas of the ocean floor. And he spends two or three months a year — more time than he would like — at sea, away from his wife and two young children, doing his own first-hand ocean explorations.

In the summer of 1986, for instance, he spent 34 days at sea on one such excursion.

That was the voyage on which he and the other scientists in the American submersible Alvin — David Piper of the Bedford Institute of Oceanography, Dal graduate student John Hughes Clark and Alexander Shor of Columbia University — stumbled onto the giant clams.

At the time, the research team was exploring the effects of a 1929 underwater earthquake. It had shattered part of the Laurentian Fan off the Grand Banks and created a tidal wave that killed almost 30 people in Newfoundland.

The quake also put a number of transatlantic cables out of commission. They broke sequentially because of a turbidity current (giant mudslide) caused by the earthquake.

On the August trip, Mayer's group was investigating the nature of gravel waves left by the mudslide.

The shellfish communities were a surprise, because there are nowhere nearly enough photosynthetically derived nutrients at 4,000 metres to support such a large group of organisms.

Smaller communities of this sort have been found at mid-ocean ridges, where hot hydrothermal fluids laden with minerals provide chemical energy to produce organisms. But there is no evidence of hydrothermal vents in the Laurentian Fan region.

Mayer's team went back to the area in May in a surface ship, and dredged up about 20 living clams, which now are being analysed at Woods Hole Oceanographic Institution and Harvard University to find out what they've been eating.

Mayer and the other scientists suspect that the communities are living off bacteria that feed on methane gas seeping from the sediments below.

If so, that would indicate — depending on the source of the methane — that there are also oil deposits in the area.

The discovery may not mean much

Mayer's at sea for weeks at a time

commercially in the immediate future, Mayer says. Because the site is so deep, there would be no chance of direct oil exploration.

"The commercial interest, in terms of

oil exploration, would be much more long-term, in terms of understanding the environment in which these kinds of deposits form."

If the money comes through for more dives in a submersible next summer, a team representing different scientific fields — biochemists, biologists, geologists and geophysicists — will attempt to examine the area in detail.

"When you go down in a submersible and discover something by accident, it's difficult to do the right thing, especially when you have a bunch of other objectives that you actually came down to accomplish.

"If we go back again, from what we've learned already we can formulate some very specific questions . . . We'll be particularly looking out for the relationships of the clam groups to changes in the underlying geology, things like that.

"It will all be pre-planned but I'm sure there will be lots of new surprises, too, and we'll have to wait for the next time to figure them out." □

When getting there is not half the fun

When Larry Mayer started diving in submersibles about three years ago, one of the first lessons he learned was that the rigs aren't climate-controlled. That means that the temperature inside the rig, where a couple of passengers are crouched along the sides of the vehicle for eight to 12 hours at a time, gets colder as the rig goes deeper.

"I learned after the first dive that it's a good idea to wear long johns," Mayer says.

As the rig gets colder, moisture given off by the occupants condenses when it hits the cold air.

"The first time I went on a dive, I was sitting looking out the window, and all of a sudden water started dripping on my head. That made me think for a second. The pilots get a kick out of watching that happen to people for the first time."

Mostly, Mayer says, he's physically rather than mentally uncomfortable on dives.

"Usually people take turns diving because of the cold and cramped con-

ditions. There's no bench or anything; you just curl along the curve of the sphere. They put some nice, thick padding on it, mostly to insulate you from the cold, but there are always connectors and corners that protrude, and anytime somebody wants to get up and stretch, everybody has to move."

Usually the pilot shuts off the lights on the way down and cranks up the tape deck. Whether that experience is good or awful, Mayer says, depends on the pilot's musical taste. One, he recalls, was a heavy-metal fan, "and it bothered me quite a bit." But another played music by the late folksinger Stan Rogers, and "that was a very enjoyable experience."

In spite of these distractions, every dive seems to take a long, long time.

"It's really debilitating, so people usually are not too keen to go diving two days in a row.

"But it's so exciting, it makes it all worthwhile. Very few people get a chance to get a first-hand look at the ocean floor." □

Dal organizes run for research funds

When a short-staffed Canadian Cancer Society office in Halifax appealed for help in organizing the local Terry Fox Run in September, Dal employees offered their services.

In doing so, they helped the Cancer Society raise about \$25,000. They also helped the university, which benefits from research funding from the Terry Fox Foundation.

One beneficiary on campus, for instance, is the medical school, which can hire four new faculty members with the aid of a \$500,000 grant last year from the Terry Fox Regional Development Program. The grant, spread over four years, will allow the university to add to the number of researchers studying cell growth, a field central to understanding cancer.

Over the past few years, a number of

Dal medical and dental students have received Terry Fox cancer research clerkship awards, which encourage students to learn the methods and philosophy of cancer research by taking part in an ongoing research program. Each student receives a maximum of \$10,000 for work done over two summers and an academic year. Dal winners in 1986-87 were Farshad Sepandj and Douglas Manuel of the medical school, and C.E. Pauley of the dentistry school.

One of the largest awards was a \$1 million Terry Fox special initiatives grant awarded over five years to Robert Chambers, a medical school professor and head of the biochemistry department. Chambers, who joined Dal in 1981 with the grant, used it to study tumor growth.

In 1981, Dal also received more than \$650,000 in other forms of Terry Fox funding, including more than \$525,000 for taking part in a five-year, nationwide breast-screening clinic. □

— Amanda Pelham

No vats of Jell-O for our grown-ups

Dalhousie is a school for grown-ups, says the recently published *Guide to Canadian Universities* by Toronto writer Linda Frum.

"You will never be forced to play moronic ice-breaking games . . . Never, even if you want them to, will your classmates paint you purple and throw you into a pool of green Jell-O. There is no football at Dalhousie. There are pep rallies, but nobody goes."

But if Dal students face a dull campus life — partly, Frum says, because of the dampening effect of the abundance of graduate students — they also have the benefit of an "unnervingly attractive" campus.

Dal is also the finest academic institution in the Maritimes, and the best place to study outside central Canada, Frum says. □

The Four Standards Of Excellence

1 Salespeople Committed To You.

Enter our showroom and meet a knowledgeable team of sales professionals. They're committed to fully understanding your needs. Whether you want to buy or lease, they'll provide you with all the facts on our complete line of new Hondas.

2 A Service Team At Your Service.

When your Honda needs servicing our factory trained technicians and consultants are ready. Their experience assures the highest standards. Their efficiency assures prompt service. A guarantee you'll drive with confidence.

3 A Parts Department With Parts. Now.

Our extensive parts department assures the speed and efficiency of our service department. If your Honda needs a new part, you can feel confident your car will be on the street fast.

4 A Body Repair Shop Dedicated To Perfection.

Our licensed technicians are proud of their ability to repair and refinish Hondas to factory standards. Our complete body repair shop features the industry's most up-to-date equipment and a 24-hour towing service.

The president's symposium on Undergraduate Education at Dalhousie March 3-5, 1988

"Undergraduate education and the support and strengthening of it is a matter of high priority at Dalhousie The objective . . . is to provide undergraduate education of a quality unsurpassed in Canada."

Howard C. Clark
President and Vice-Chancellor
10 September 1987

A major symposium on undergraduate education will be held at Dalhousie on March 3-5, 1988. It will seek:

- to better understand the nature, expectations and experience of undergraduates at Dalhousie
- to arrive at a clearer conception of the knowledge, skills and experiences which should be imparted to all undergraduates
- to determine how the desired educational outcomes can be more effectively promoted — in the classroom, through academic and student support services, in extra-curricular activities

and in other ways.

Alumni are invited to attend the symposium.

Alumni, your views are wanted

Help shape the future of undergraduate education at Dalhousie! Your views as former students are important. Please complete the short questionnaire below and return it to Dalhousie by December 31, 1987. A summary of alumni views will be featured in a subsequent issue of the *Alumni Magazine*.

Undergraduate experience questionnaire

Dear Alumni:

In an attempt to better understand and improve undergraduate education at Dalhousie, we are collecting the views of alumni, current students, parents, faculty and staff. You are invited to reflect upon your own experiences at Dalhousie in responding to the following questions.

1. Your gender: male female
2. Your current age: _____ years
3. Number of years you attended Dalhousie: _____ years
4. In what year did you first enrol at Dalhousie? 19 _____
5. During your time at Dalhousie, were you enrolled (check both, if relevant):
Full-time? Part-time?
6. At Dalhousie, were you enrolled in (check more than one, if relevant):
Arts & Science Health Professions
Law Dentistry
Medicine Graduate Studies
Administrative or Management Studies
7. Were you ever enrolled at any other university?
As an undergraduate? In a graduate program?
In a professional program (e.g. MD, LLB)?
8. If you obtained degrees, diplomas and/or certificates from Dalhousie, indicate which:
BA BSc BComm BEd
Master's MD LLB DDS
PhD Diploma or Certificate
None Other degree (specify) _____
9. If you left Dalhousie before completing your program, please tell us why.

10. Were you employed while attending Dalhousie?
Full-time Part-time Not employed
Average hours/week if employed _____
11. What is your current occupation? _____
12. Where do you currently live?
Metro Halifax/Dartmouth Other Nova Scotia
N.B., P.E.I. or Nfld. Quebec
Ontario Western Canada
Territories Outside Canada
13. Do you have children who have attended Dalhousie? yes no

14. Were these objectives of major, minor, or no importance for you when enrolling at Dalhousie?

	Not Important	Minor	Major
To become a better educated person	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To qualify for a high-level occupation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To meet the educational requirements for my chosen occupation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To be with friends attending Dalhousie	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To meet new and interesting people	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To develop independence from my parents ...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To increase my earning power	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To take a variety of courses and see what was best for me	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

15. How well did your experience at Dalhousie contribute to meeting each of these potential objectives for you? Please respond for each item.

	Not Well	Well	No Opinion
To become a better educated person	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To qualify for a high-level occupation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To meet the educational requirements for my chosen occupation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To be with friends attending Dalhousie	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To meet new and interesting people	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To develop independence from my parents ...	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To increase my earning power	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
To take a variety of courses and see what was best for me	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

16. Please indicate the extra-curricular activities in which you participated while at Dalhousie. (Check all that apply.)

Student Government	<input type="checkbox"/>	Student Publications	<input type="checkbox"/>
Theatre/Dramatics	<input type="checkbox"/>	Departmental Clubs	<input type="checkbox"/>
Student Societies	<input type="checkbox"/>	Varsity Athletics	<input type="checkbox"/>
Intramural Athletics	<input type="checkbox"/>	Fraternity/Sorority	<input type="checkbox"/>
ROTC	<input type="checkbox"/>	Employment	<input type="checkbox"/>

Other (please specify) _____
Please indicate which one of these activities provided the greatest benefit to you, while at Dalhousie or subsequently.

17. What is your assessment of the undergraduate experience during your time as a student at Dalhousie? Please circle the number that most clearly represents your view on each item.

	Very Negative			Very Positive	
Course content	1	2	3	4	5
Quality of teaching	1	2	3	4	5
Accessibility of faculty	1	2	3	4	5
Library and computing facilities	1	2	3	4	5
Student support services (health, counselling, advising)	1	2	3	4	5
Extra-curricular activities	1	2	3	4	5
Social life	1	2	3	4	5
Accommodation and meals	1	2	3	4	5
Buildings and equipment	1	2	3	4	5
Registration, class scheduling and academic regulations	1	2	3	4	5
Accessibility for part-time and mature students	1	2	3	4	5
Opportunities for intellectual stimulation	1	2	3	4	5

18a. How important do you think the development of each of the following should be in the undergraduate experience at Dalhousie?

	Least Important			Most Important	
a. The capacity for inquiry, logical thinking and analysis	1	2	3	4	5
b. A sense of history	1	2	3	4	5
c. Literacy — the ability to communicate with precision and style	1	2	3	4	5
d. Skills and attitudes for lifelong learning	1	2	3	4	5
e. Moral maturity — the ability to make moral judgments and understand moral issues	1	2	3	4	5
f. Skills for obtaining and maintaining employment	1	2	3	4	5
g. Development of an international, multi-cultural understanding	1	2	3	4	5
h. Social maturity — the ability to interact effectively with others	1	2	3	4	5
i. In-depth knowledge of a particular field of study	1	2	3	4	5
j. Numeracy — a basic competence in quantitative skills	1	2	3	4	5
k. General knowledge of several different disciplines	1	2	3	4	5
l. Aesthetic maturity — the experience and appreciation of the fine and performing arts	1	2	3	4	5
m. Other (specify) _____	1	2	3	4	5

18b. Which two of the above do you feel are the most important?
_____, _____

19. If you could make one change in the undergraduate experience at Dalhousie, what would it be?

20. Your name (optional) _____

Thank you for taking the time to participate in this survey. Your response should be returned by December 31, 1987 to enable us to analyze the data in time for the President's Symposium; we sincerely appreciate your cooperation. Please be assured that your response will be held in the strictest professional confidence.

President Howard Clark: What's ahead for Dalhousie?

In this wide-ranging interview with Dal public relations director Marilyn MacDonald, Dr. Clark reflects on his first year as president and on some of his hopes for the university's future

M.M.: You came to Dalhousie from outside the university, outside the region and with a perspective that was an outsider's perspective. You've been here a year now. Are Dalhousie's problems unique or are they simply a part of what most Canadian universities are going through?

Dr. Clark: Oh, I don't think they are unique. Many of the problems are problems that other Canadian universities are going through or have been through. There's a perception here that the funding issue is a uniquely Dalhousie problem. It isn't. Underfunding is something that has been a concern in Ontario since 1973. At Dalhousie it has only been an issue since the early '80s.

M.M.: If the underfunding issue is common to most Canadian universities, is there anything in the particular formula under which Dalhousie and indeed Nova Scotian universities generally are funded that poses a special problem?

Dr. Clark: Yes, although there again I think you have to recognize that any funding formula has problems. There has been a debate in Ontario on the funding formula since the time it was created. They've only just managed to make a major change last year. But certainly, here, there is a problem with the equalization component of the formula, which was originally intended to bring all of the Nova Scotian institutions to a regional average: that policy, I think we can demonstrate clearly, is not working. And it has the effect at the present time of giving a number of universities, including Dalhousie, funding increases that are below inflation. And that leaves that group of universities, of which we are one, with a difficult problem annually.

M.M.: Is this a problem, then, that we are simply not going to solve without some kind of change in the formula?

Dr. Clark: In a sense that's true. The

Maritime Provinces Higher Education Commission (MPHEC) is engaged, at the very early stages, in a review of the funding formula; but I don't think that's going to be complete for some considerable time. It obviously won't be completed until the composition and the mandate of MPHEC have been resolved to the satisfaction of the Nova Scotia government. That will take some time. And any further changes in the formula will take even longer. In the meantime, I think we've got to work very hard to get some temporary adjustments that at least will ensure funding increases for universities like Dalhousie, that will be more equitable with regard to inflation.

M.M.: How's this going to affect Dalhousie's budgeting in the foreseeable future? You've been through a year now and in many ways it has been a tough year. I think you yourself said that the budget that you presented earlier this year was not the one that you would have chosen to present in your first year as president. Where are we going from here?

Dr. Clark: Well, at the moment I hope that we may be able to persuade the

government to make some temporary changes, not necessarily in the level of funding but in the mechanism for distribution of funding, that would have an impact in 1988-89. It would not be a major change but at the present time, in terms of dealing with the budget, it is marginal changes that will make the budget process a much easier one. So I'm reasonably optimistic that we can persuade the government to do that and to make at least some temporary changes until there is a major change in the funding formula.

M.M.: Does that mean relief from what has seemed, I'm sure, to a lot of people in the university community and to our alumni, who keep an eye on our doings here, like an endless syndrome of annual budget cutbacks, belt-tightening and so on?

Dr. Clark: Well, it's relief in the sense that I hope it would not be nearly as substantial in the next year. I think it would be unrealistic to assume, given where we are at the present time, that immediately, for '88-89, there would be no reductions at all. But I do hope we can significantly reduce the extent to which we have to cut back on the budget.

M.M.: There are a number of problems at Dalhousie I'm sure you have become very conscious of over the year that are of concern to people here. I'd like to touch on a few of them and perhaps get you to give me your thoughts on how far we have come in attacking them. One of those, of course, and it's something that alumni who come back to visit the university are quite conscious of, is the state of the physical plant at the university which has deteriorated, most certainly, over a period of years. Are we making any strides in that area?

Dr. Clark: Well, I think we are. That's something that concerned me even on the first visit to Dalhousie. It was very obvious that the physical plant was not

in good condition and that a lot needed to be done. However, in the past year I think we have made a start — it is only a start, there is an enormous amount that has to be done — toward getting the physical plant into a reasonable condition. We do have now a new Director of Physical Plant; there has been a major reorganization in the Physical Plant operation; we have begun to put in place a routine preventative maintenance approach; we have tried, particularly during the summer, to find whatever resources we could find, to do a number of things. There has been a blitz across campus to encourage general tidy-up and clean-up; minor maintenance repairs have been done; there was a fairly substantial tidy-up of classrooms in preparation for the new year; so, yes, I think we are making progress, but there is just an enormous backlog. I think my senior colleagues and I feel that we could probably without any difficulty at all spend a minimum of two to three million dollars, and that would only be on essential maintenance. But we have started it and I do think the campus is beginning to look somewhat better than it has in the past.

M.M.: Labor relations: the university has had some rather high-profile difficulties there in the last few years. How would you summarize the situation now, at the end of your own first year here?

Dr. Clark: Well, I would like to think that it's a great deal better than it has been. During the year there have

unquestionably been difficult times. A lot of it I think was a reflection of that history that you described, but we do now have agreements with all of the groups on campus. They have been reached, in some cases, with difficulty but they have been reached. And I think we are now on a very much better footing. For the future, I'm confident that there will be a very much better relationship.

M.M.: You've spent a good part of the year travelling and meeting large numbers of Dalhousie alumni. How would you gauge their sense of commitment to the university and their feelings about its future?

Dr. Clark: I've been very impressed with the support of alumni. I've met alumni in many parts of the Maritimes, across Canada, New York, Bermuda. Compared with many other universities we do have some very, very loyal and enthusiastic alumni. Now having said that, though, I think we also have to recognize that in terms of that loyalty being expressed through their financial support of the university, that it's a new thing for them and for us, and it's going to take time for us to build up that financial support. Even so, I think we are beginning to do well, when you look at the 1986 Annual Fund which had over a 20 per cent increase, not only in terms of actual funds received, but in terms of the number of people contributing. I think that's a good indication of the potential that's there, and again I

think over the next few years we can build on that support very well indeed.

M.M.: I think it's appropriate in this fall issue of the *Alumni Magazine*, to touch on one practical result of the Annual Fund that I know you are closely identified with, and that's the National Scholars Program. Do you want to say a word or two about just what that is and how it relates directly to alumni support?

Dr. Clark: Well, clearly one of the things Dalhousie has needed, does need, is better scholarship support, particularly for entering students, so that we can be sure we are attracting the very best students, not only from the Maritimes, but also nationally. I think it really is important for Dalhousie to be seen as a national university and to be competing outside the Maritimes for the very best students. And to do that we need to be able to offer competitive entrance scholarships. The Annual Fund in 1986 was a major factor in allowing us to increase the value of entrance scholarships, and I hope that in the next year we can build on that and introduce a National Scholars Program which will allow us to be really competitive and to attract to Dalhousie first-rate students from right across the country.

M.M.: That touches very much on an area that seems to have been given top priority by your administration. In September you announced a commitment to considerable improvement in Dalhousie's undergraduate program. How crucial do you see this as being to the future of the university?

Dr. Clark: I think that it is absolutely central and it goes back to some of the earlier discussion we were having about funding. Interviews of this sort invariably start off with funding, and that tends to create the impression that underfunding is the most serious problem. Now I don't deny that funding is a problem and that we have to address it, but on the other hand, not only at Dalhousie but in far too many universities, we have become so preoccupied with funding, with underfunding, that we tend to lose sight of what are some of the other central issues that the university should be addressing. And when you put that on one side, it always seems to me that one of the key things that universities at the present time have difficulty with is in stating clearly what they are attempting to achieve in terms of undergraduate education. Are we train-

Meeting students during orientation week

Winter Carnival: the president samples a giant sundae

ing, are we educating, are we doing both? What's the balance we're trying to achieve, how well are we achieving it? To what extent are we willing to measure the progress we're making in achieving those objectives? It seems to me that the central issue relating to the nature and quality of general undergraduate education is one that isn't dependent, to a high degree, on funding. It is dependent on the extent to which we, within the university, get together to agree upon what our fundamental educational objectives really are.

M.M.: Does this mean a de-emphasis on research and the role of research and graduate programs at Dal?

Dr. Clark: No, no! It doesn't mean that at all. And it's always interesting to me that whenever this sort of comment I made a moment ago in terms of teaching is made, the response is the response you gave, as if to confirm the belief that there is in fact a competition between teaching on the one hand and research or graduate work on the other. I have never believed that there is, but on the other hand, in recent years, at Dalhousie and elsewhere, we have rarely discussed, in a university forum, what should be the appropriate balance between teaching and research, what is the real relationship between teaching and research. Our problem is that these are the fun-

damental issues facing the university, and yet we've neglected our responsibility to discuss them, and to arrive at a common consensus of where we're going.

M.M.: Have there been any surprises for you over the past year, either in terms of what you've found at Dalhousie or what you've found in the community?

Dr. Clark: I'm not sure that I would say there have been surprises. I think the general impressions I had before I came

here have generally been confirmed. Some things have been much better than I had thought initially, a few things have been a bit worse. I'm not sure that I would describe them as surprises.

M.M.: The outside community in which Dalhousie exists is very important to us and I know that you have been conscious over the past year of certain public attitudes about the university and about its role in the community. Are there any changes in that area that you would like to see at Dalhousie?

Dr. Clark: Well I hope we will see some changes. Whether they will be changes that will occur suddenly, that one can easily identify — I think that that may be questionable. But I do hope we will see, over the next two or three years, a growing feeling that Dalhousie is a part of the community, is there to serve the community, and really is an integral part of the metro region, of Nova Scotia, of Canada. The idea that universities are ivory towers, unrelated to the community, and that's the best way they function — those are not ideas that I share. I think it is far better, far more realistic to recognize that the university ultimately exists to serve society, and it does that in a number of ways: obviously, through its teaching and research, but in many other ways as well. The whole question of what that relationship is and should be is a very important one. But the belief that we are here primarily as an institution that serves society, I think, is one we have to re-emphasize all the time. □

Paying a debt to an old friend

If you've had the privilege of a university education, Donna MacRae Curry believes, you owe the university something in return

Dr. Donna Curry's grandfather, Duncan MacRae, started it all more than 80 years ago, when he paid his way through Dalhousie's medical school by working in the Cape Breton coal mines. He eventually went to England, then back to Sydney Mines, N.S., to practise ophthalmology and general medicine.

But ever since then, members of his family have been involved in a long and mutually rewarding friendship with Dalhousie.

One of them is Donna MacRae Curry, a Halifax physician who has been working on behalf of the university almost from the time she obtained her medical degree in 1967.

Curry is a warm, direct and cheerful person with what her friends describe as boundless enthusiasm for the things close to her heart — principally, her family, her medical practice and Dal.

It's not surprising that she was chosen this year for one of Dal's most difficult and crucial volunteer jobs — heading the campaign to persuade alumni and friends of the university to contribute to Dal's Annual Fund, which this year has the highest-ever goal of \$520,000.

It's also not surprising that she gets a little impatient at the notion that people who've paid their tuition have paid their debt to the university.

"I hate the statement, 'Why should I give to Dal — what have they ever done for me,'" Curry says. "What a crock. Even if you're staying home looking after kids after graduation, your horizons have been broadened by university; you've had an experience many people haven't had.

"A lot of people don't know that their education is so heavily subsidized. They think that when they paid their tuition, they paid for everything. It's not true. It's absolutely astronomical, for instance, what it costs to train a physician." (Students in medicine cost Dalhousie about \$25,000 each a year, or more than 12 times what tuition fees bring in.)

People who've had the privilege of a university education, Curry believes, should donate something in return.

"And if you live right here in town, I feel you should help out a little bit."

She has been doing her bit since 1972: on the Alumni Association board of directors for several years and as association

Curry: friendship with Dalhousie is partly a family tradition

president for one; as a member of various committees, including one on the future of the Alumni Association and another on Dal athletics; and, for six of the past eight years, as a member of the university board of governors, of which she is honorary secretary.

Dalhousie has always been part of Curry's life. She grew up on Jubilee Road, near the campus. Her father, Donald MacRae (BSc '30, MD CM '34), FRCS (C) joined the eye, ear, nose and throat department of the medical school in 1938, and was professor and head of the department of ophthalmology from 1961 to 1975. Now professor emeritus, he retired from his private practice three years ago, at age 75.

Four of his daughters earned post-graduate degrees from Dal — Donna Curry, Peggy Leighton (MD '77), Mary Pellerin (BA '65, BEd '66), and Libby MacDougall (BA '60, BEd '61). The fifth, Helen Snow, a registered nurse,

went back to Dal this fall for graduate studies in health administration.

It was at Dalhousie that Donna met her husband, John, a New Yorker who was in her class at medical school.

Donna didn't decide to go into medicine until her final year in science at Dal. Until that point, she recalls, she went to classes, played basketball and volleyball and generally had a good time. As an undergraduate, she won the Class of '55 Athlete of the Year Award. But, in retrospect, she laughs off any suggestion that she was an athletic star. "I got a few little trinkets, but when I look at the condition of athletes today, and when I look at who has won that award since, I think, wow. I think I was just having fun."

In those days, she recalls, few women studied medicine. After toying with the idea of physiotherapy as a career, she decided, in her final undergraduate year, to become a physician. There were only two other women in her class.

"When I got into medical school, I hung up my sneakers. You work really, really hard."

After graduation, John and Donna Curry moved to Edmonton, where John did his surgical training, and where two of their three children — John, 18, Libby, 16, and Fred, 13 — were born. (John, in keeping with family tradition, is in his second year at Dalhousie.)

When the Currys came back to Halifax in 1972, Donna

worked part-time as a family physician for a while because the children were small. But she quickly became involved with Dalhousie again: she agreed to run for the Alumni Association board of directors.

ANNUAL FUND

The Annual Fund provides money for operating purposes.

Last year, the fund helped boost the entrance scholarship program with \$45,000 in unrestricted funds. Other money is used for projects identified as important in each department or faculty. In the past, funds have been used for such purposes as dentistry production equipment, a humidity control system for the biology greenhouse and a theatre lighting board.

Peggy Weld, vice-chairman of the Dal board of governors, describes Curry as "one of the most enthusiastic people I know, and someone who cares deeply about Dal. She puts her whole heart and soul into everything she does — her mothering, her work, her volunteer work."

Most of the year, Curry says, all of this leaves her working "absolutely flat out"; there's not much time to improve her golf game, for instance.

"Until my children were old enough to play with me, I didn't play at all. It's a selfish sport. I can't practise medicine and in my spare time just play golf. But it's a great way to have good communication with your kids. It's a good family sport. So is sailing."

The Currys do most of their sailing at Chester, on Nova Scotia's South Shore, where they have a summer home overlooking the back harbor. On her summer holidays there, that's where Donna Curry finally gets to play — golf in the morning, sailing in the afternoon with John and the kids and a handsome black Labrador retriever named Smudge.

But her volunteer work takes up a lot of her time and attention, whether she's on holidays or not.

Last June, when the Currys were visiting friends in Vermont, they decided to take a side trip to New Hampshire to stop in at Dartmouth College, where John had done his undergraduate work. Donna wanted to talk to the people in Dartmouth's Annual Fund office.

They told her that Dartmouth, with an alumni about the size of Dal's, had set its annual fund-raising goal this year at \$12 million. Curry doesn't believe that Dal alumni should be expected to come up with quite that much, but she does believe the Annual Fund's goal could be much higher than the current \$520,000.

One way of encouraging people to dig deeper into their pockets, she believes, is a class-agent system: A volunteer from each year would be

responsible for canvassing his or her classmates. The theory is that you're more likely to donate money if you're approached by somebody you know. This year, the system is being tried with the classes of 1960 to 1970 of the medical faculty alumni, and will be expanded to other classes and faculties if the project succeeds.

As far as Donna Curry is concerned, it simply has to succeed.

"The Annual Fund can't fail. The university needs it too much." □

Look what's happened to Argyle Pine!

Our popular Cannonball Bed

If you thought there was nothing more to Argyle Pine (the store) than Argyle Pine (the furniture) then you're in for a pleasant surprise. Our new name says it all.

The **Woodcraft Store** has a great selection of pine, oak, and custom furniture, quality furnishings for the kids room or cottage,

gifts, accessories and much more. So visit us at the **Woodcraft Store** and see what you've been missing. Oh, and don't forget to ask about Argyle Pine...the name that started it all.

A first novel set partly at Dal gets rave reviews

Return Journey, a first novel by Helen Flint (BA '72), which is set partly in Halifax and at Dalhousie, has been getting rave reviews.

When the novel was released in Britain in July, the *Times Literary Supplement* described it as "full of stinging vitality." The *Daily Telegraph* called it "a brilliant novel." And critics on the BBC arts program Kaleidoscope concluded: "This is a writer. She is going to write on. She has tremendous energy and control. She has everything."

The British Society of Authors was so impressed by the book, it awarded a \$10,000 prize to Flint, who now lives in Bournemouth, England.

Return Journey, which was published in Canada in October by General Publishing, is set mainly on an Air Canada flight from Halifax to Heathrow. A young Canadian woman is taking her invalid mother to a nursing home in England. The novel develops into a frank examination of the problems of the physically disabled and their families, relieved by tragi-comical flashbacks to the family's earlier life in West Africa, California, Quebec, England and Nova Scotia.

Helen Flint's ambitions to become a writer were first nourished at the Halifax Grammar School, where she published poetry in the school yearbook, and as an English major at Dalhousie, when several of her poems were featured on the CBC literary program Anthology.

After Dal, Flint, who is the daughter of Dal history professor John Flint, went on to win a place at Oxford's St. Anne's College, where she read English honors. She has worked as a waitress in a Halifax restaurant, a crew member of the CN ferry across the Bay of Fundy, a translator and reviewer, a high school English teacher in Britain and an examiner for the Oxford "A" levels in English literature.

She is married, with a daughter, 8, and a son, 5. □

A+ TOP MARKS

When it comes to group insurance, your Alumni Association program deserves top marks.

Why? Because the plan is an economical and convenient way to help you provide for your family's financial security.

TOP MARKS FOR VALUE

The plan's low premiums, high maximums and continuing improvements give you excellent value for your insurance dollar.

- **LOW RATES:** A male non-smoker, 30 years old, can get \$60,000 worth of term life insurance for only 20¢ a day – less than the price of a daily paper.
- **EXTRA COVERAGE:** Each unit of life coverage is now worth \$5,000 more than when the plan started, at no extra cost.
- **SPECIAL FEATURE:** The INSURANCE CONTINUATION BENEFIT provides lifetime protection from age 70 with no premium charge.

Spouses now included

TOP MARKS FOR FLEXIBILITY

A variety of options provide flexibility to help you meet your own particular needs.

Higher maximums →

- You can select life coverage in units of \$30,000 to a maximum of \$360,000 for yourself, \$720,000 for you and your spouse.
- **NOW:** Disability insurance is available to help protect your income if you are unable to work because of an accident or illness. And you will benefit from the low group rates.

← *New unit value*

ALL THIS AT YOUR FINGERTIPS

It only takes a phone call. Ask us for a free brochure and discover how your Association insurance program can help you plan for the future, and why it deserves TOP MARKS.

Ian Palmeter takes over as president

The Alumni Association's new president is Ian Palmeter (BA '50, LLB '53), Chief County Court judge of Nova Scotia.

Palmeter, 58, a member of the Dalhousie board of governors, is also active in a wide variety of other community organizations.

Among other things, he served on the Nova Scotia Provincial Council of the Boy Scouts of Canada, was president of the Halifax Parents' Association for Children with Learning Disabilities and has been involved at the executive level with Home and School associations.

Palmeter, who was born and raised in Halifax, was admitted to the Nova Scotia Bar in 1954. A former senior partner of Blois, Nickerson, Palmeter and Bryson, he was appointed a County Court judge and local judge of the Supreme Court of Nova Scotia in February 1985 and Chief County Court judge the following October. □

Nursing grad wins two awards

Rosalie Starzomski (BN '78), MN (University of Calgary '84) has received the 1987 Award of Excellence for clinical nursing practice from the Registered Nurses' Association of British Columbia. She also received the President's Award from the B.C. branch of the Kidney Foundation of Canada for outstanding dedication and contributions to that organization.

Starzomski is nephrology clinical nurse specialist at the Vancouver General Hospital and clinical assistant professor, faculty of nursing, University of British Columbia.

Nursing school pioneer dies

Dr. E.A. Electa MacLennan, founding director of the School of Nursing, died in August.

Dr. MacLennan, RN, BA, MA, LLD, a native of Brookfield, N.S., graduated from Dalhousie in 1929 and returned in 1949 to serve as director of the school, a position she held until 1972.

Colleagues and students describe Dr. MacLennan as a visionary who was strongly committed to advanced education for women, particularly nurses. This commitment was marked recently by the establishment of a scholarship fund at the School of Nursing to support graduate study in nursing.

Dr. MacLennan believed that nursing education should include a firm grounding in the liberal arts; that continuing education for nurses is crucial for the protection of the public; and that nursing must be based on sound research. She was a founding member of the board of the Research and Development Fund of the Dalhousie School of Nursing and worked hard to ensure that research support was available for nurses.

During her career, Dr. MacLennan achieved national and international recognition. For several years, she was national supervisor of the Victorian

More than 80 health-care professionals met at Dalhousie in June to discuss nursing research in Nova Scotia. Organizers of Dal's first annual Nursing Research Day were, from left, Florence Mayrick, Lynette Mensah and Anita MacDougall (Carlos photo)

Order of Nurses in Ottawa. She was a past president of the Canadian Nurses' Association, a founding board member of the Canadian Nurses' Foundation, a life member of the Registered Nurses' Association of Nova Scotia and a board member of the International Council of Nurses from 1962 to 1969. She was awarded the Canada Centennial Medal

in 1967.

In 1976, Dalhousie recognized Dr. MacLennan's contributions to the health professions by bestowing on her an honorary doctorate of laws. At that time, she was given the honor of wearing the gown and biretta worn by the Queen Mother when she received an honorary degree at Dalhousie. □

There are two uncommon things available at every Wacky Wheatley's Store in Atlantic Canada — The first one is a low price — the second may surprise you...

It's product knowledge. No discount electronics store spends more time training their staff than Wacky Wheatley's.

Not only do we sell black and white T.V.'s for \$69.00, we also sell 28" monitors for \$2000.00.

And the difference between the two is more than just \$1931.00.

So, next time you're in the market for a microwave, VCR, color T.V., stereo system, camcorder, or whatever — drop into a Wacky Wheatley's Store. You'll find a price you just can't beat, and knowledgeable sales staff.

**WALWYN
FUND SERIES**

**Promotes you to Chief
Executive Officer of
an important business—
Your Portfolio**

When you invest in the **Walwyn Fund Series**, you become CEO of your own portfolio. You delegate: we work.

And as CEO, you choose any or all of the seven Walwyn investment funds that fulfill your investment objective and provide the greatest comfort.

- No front end sales charge. All your investment goes into action right away since you pay no front end sales commission or fee.
- Flexibility for free. You can transfer at absolutely no cost from one Walwyn Fund to another.
- \$1,000 minimum initial investment.
- Semi-annual reports.
- Automatic reinvestment of income and dividends

The **Walwyn Fund Series** includes:

BOND FUND: income and protection of capital from investment in highest quality bonds.

PREFERRED FUND: dividend income from quality Canadian companies.

CANADIAN EQUITY FUND: diversification across many Canadian companies for longer term growth.

INTERNATIONAL FUND: investments in U.S. and foreign markets for long-term growth.

OPTION EQUITY FUND: investments in Canadian and U.S. dividend paying stocks and use of sophisticated option writing techniques for income and some capital gains.

MONEY MARKET FUND: for investors who seek a safe haven between investments.

There is a **Walwyn Fund Series** RRSP too—\$25 administration fee. For investors who want to be CEO of their RRSP.

Call or mail this coupon for a free information kit which includes brochures on each Fund, the Fund Managers and a prospectus.

***NO
FRONT END

Deaths

Frederick Herbert Palmer, Engineering'10, of Melbourne, Australia, on July 29, 1987. He had a long career as Canadian trade commissioner in various parts of the world.

Canon Foster Almon Heffler, Arts'13, of Halifax, on September 1, 1987. He spent 51 years in the ministry, including 23 years as rector of Trinity Anglican Church, retiring in 1967.

Dr. Donald John MacKenzie, MD'18, of Sydney, N.S., on June 28, 1987. He initiated a laboratory medicine program for students and in 1923 the first laboratory technicians were turned out. He

DALUMNI

was director of the N.S. Provincial Laboratories for 36 years. In 1977, the Victoria General Hospital's pathology building was rebuilt and renamed in his honour.

Charles Edward Fader, Pharmacy'20, of Halifax, on August 5, 1987. He founded Fader's Pharmacy Ltd. in 1921.

Rev. Dr. Herman Ethelbert Campbell, BA'22, of Halifax, on July 6, 1987. He served as minister in several communities in Nova Scotia and New Brunswick as well as in Toronto. Dr. Campbell was instrumental in helping secure a family court for Nova Scotia.

Dr. Donald Robertson Webster, OBE, CD, BA'22, MD'25, PhD'32(McGill), of Bayview, Pictou, N.S. In 1953 he was appointed surgeon-in-chief at the Royal Victoria Hospital in Montreal and a professor of surgery at McGill. That same year he was appointed honorary surgeon to the Queen.

Dr. Ranald Ian MacDonald, BA'26, MD'30, LLD'68, of Wolfville, N.S., on August 20, 1987. After wartime service with the Royal Canadian Army Medical Corps in England and Europe he became chief of medicine at Sunnybrook Hospital, Toronto, and associate dean of medicine at the University of Toronto.

Gladys Elizabeth (Blackall) White, Arts'20(K), of Halifax, on August 22, 1987.

Dr. Evelyn Frances Hyslop Rogers, BA'25, MD'27, of Utica, N.Y., on May 13, 1987. In 1948

she became state health officer for the Utica District, retiring in 1968.

Gilbert Rutter Morrison, Arts'26, of Halifax, on May 31, 1987. He was an engineer with the N.S. Department of Highways for 34 years.

Margaret Lois (Boutilier) Cooke, Arts'29, of Halifax, on May 20, 1987.
