20 October 1960

A small balloon
brown paper parcel
Instruments humidity
element - a hygrometer,
thermistor or thermometer
A sun screen in case
sun ^{rays} warms the instruments
~~The~~ can be adjusted
and then the box is
placed in an air tight
container, ~~to~~ a fan is
switched on to distribute
the air and bring every
thing to a constant.

"This instrument is
probably as old as you
are"

Then the instruments
were taken outside

to the "beehive"

The balloon was filled
from caustic soda
aluminium & water.

Static electricity
can ignite it.

"Slightest spark can
send it up"

Nylon parkas will
be replaced with
cotton clothing as the
nylon retains static
- nylon against nylon
makes a charge of
some sort.

Chaps flunk the course
because they are too
nervous. - You can
drop a metal tool on
the floor and create

a spark, so it is no
use being nervous. United
States ~~is~~ will not
export helium although
it is taken from the
earth as an inert
natural gas. Not enough
Isolation in met
stations

Take books & don't
read them or model
aircraft & don't make
them.

Deck Chalice took
to ham radio & hiking
changed from science
fiction to serious
reading!

The balloon came out on the end of a long string — and with tremendous pull, hoisted the net box on its trip 18 miles above the earth.

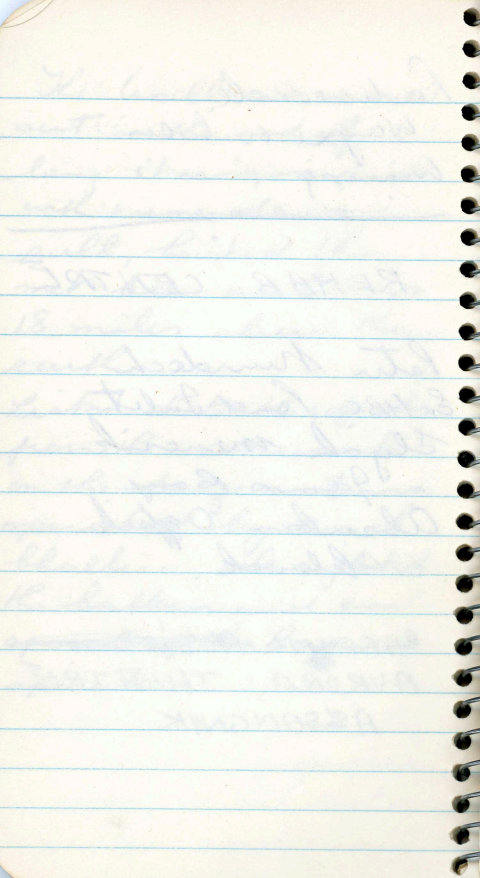

Listened to the signals from the instruments on the large antenna operated by Arch Ballie who inflated the balloon and was ~~operating~~ the Raywin operator.
