KENTVILLE, N. S.

Date May 9th. 1935

NOVA SCOTIA SANATORIUM

MEDICAL REPORT

Name Bigelow, Mr. John Address Canning S.M./W/D.
Sent by Dr. Frank Chute Address Canning N.S.

PRESENT SYMPTOMS:

Loss of Strength Loss of Weight Loss of Appetite Cough
Sputum Tubercle Bacille Fever Haemoptysis
Date -- Amt. -- Pleurisy (Dry or serous) Date -- Side --

PHYSICAL FINDINGS:

Right: Slight dulness to 3rd. rib and 4th. vertebral spine.
Breathing bronchovesicular over the apex front,
rough vesicular over the apex back, then normal
vesicular to base front and back. Vocal resonance
normal. On coughing no rales.

Left: Normal findings.

RADIOGRAPHIC OR FLUOROSCOPIC EXAMINATION: (Summary)

Right: There is a small area in the 2nd. interspace, which is probably of no present clinical significance, but we would advise a recheck by x-ray examination in three months.

Left: No evidence of recent pulmonary pathology. We would note the presence of calcification within the hilus, indicative of an old infection (Childhood Tuberculosis)

DIAGNOSIS Probably not Tuberculous.

REMARKS Examination requested again at the end of three months.

A. F. Miltner
A. F. Miltner M.D.
Medical Superintendent.
