

There were so many favourable comments in Halifax on the series of University lectures which were thrown open to the public last winter that the experiment will be repeated. These lectures will be given on Friday evenings in the University gymnasium, beginning January 12. The speakers are: Dr. Dixie Pelluet, of the Department of Biology, Dalhousie University; Dr. W. D. Woodhead, in charge of the Classics Department, McGill University; Dr. H. F. Munro, Superintendent of Education for Nova Scotia; Dr. H. E. Bigelow, Head of the Chemistry Department, Mount Allison University; Dr. E. W. Nichols, Head of the Classics Department, Dalhousie University; and Dr. W. Hamilton Fyfe, Principal of Queen's University.

The subjects to be dealt with include literature, science and politics; and this range will appeal to men and women of many interests.

The first subject, "Experimental Grafting in Animal Embryos", will pique the curiosity of many. Dr. Pelluet, who is known as a lucid and interesting speaker to many in Halifax, can deal with this subject authoritatively.

To defray the expenses of the course, a fee of \$2.00 is charged for the series of lectures, or fifty cents for admission to single lectures.

Dalhousie University is offering a series of public lectures which will be given weekly on Friday evenings, beginning January 12. The lecturers are all distinguished scholars and speakers - some of them on the teaching staff of the University, and others visitors from other universities. There is a wide range of subjects, literary, scientific, and political, and it is expected that citizens of Halifax and Dartmouth will be as interested in this series as they were last year. In order to cover travelling expenses of visitors and other incidental expenses, it is necessary to charge \$2.00 for a ticket of admission to these lectures: admission to single lectures will be fifty cents.

The series will be opened by Miss Pelluet, of the Department of Biology, Dalhousie University. Her subject will be "Experimental Grafting in Animal Embryos". Dr. Pelluet has had a distinguished academic career in Toronto University and Bryn Mawr University, and is known to many in Halifax as a very clear and forceful speaker. The title of her subject promises a very interesting lecture.

Herald

We note that the lecture series at Dalhousie University Gymnasium has begun successfully. Last Friday evening Miss Dixie Pelluet of the Biology Department delivered a lecture which would have been creditable to any city in the world. Halifax is fortunate in containing in its midst a University - a University moreover which considers its duties to the public, and provides intellectual entertainment of the highest kind.

The second lecture will be delivered on January 19, at 8:15 p.m. by Dr. Woodhead of McGill University on "Plato as a Literary Artist". This lecture is sure to interest many Halifax citizens. Professor Woodhead is said to be not only a great scholar but a witty speaker.

January 15, 1934.

Miss Houston,
c/o The Halifax Mail,
H a l i f a x, N. S.

Dear Miss Houston:

I am sending you, herewith, the article
for which you asked President Stanley.

I am enclosing also a ticket to Professor
Woodhead's lecture. The President hopes you will be
able to attend the lecture, as he feels you will enjoy
it very much.

Yours very truly,

/LH.

inside

An unusual opportunity for those who are interested in any sort of literature is offered in Professor Woodhead's lecture on "Plato as a Literary Artist" in the Dalhousie Gymnasium next Friday evening. In many ways Plato might be called the well-spring of European literature, and Professor Woodhead is not only a distinguished Platonic scholar but an authority on subsequent literature - particularly English literature.

Dr. Woodhead is in charge of the Classics Department in McGill University. He was a student at the "Blue Coat School" of Charles Lamb, and Samuel T. Coleridge - Christs' Hospital, London. Thence he went on a scholarship to Oxford. Graduating from Oxford with distinction he went, on business, first to the West Indies and then to North-West Canada. An accident removed him to the teaching staff of the University of Alberta, and he has been in university life ever since, - at Chicago, Toronto, McGill.

January 23, 1934.

The third lecture in the Dalhousie series is on a subject that is very timely and of great moment in the world today: "The Freedom of the Seas". The subject has been debated in modern Europe ever since the days of Hugo de Groot. In his day the dispute was between the maritime powers of Holland and England. To-day, and indeed since the War of 1812, it has been something of an issue between Britain and the United States. For these and other reasons it is naturally a matter of importance to the League of Nations.

On such a topic as this there is no better authority than Dr. H. F. Munro. A life long student of politics, he lived in the United States long enough to become familiar with the American point of view. Recently he was one of the Canadian representatives at Geneva. He is always welcome when he returns to the Dalhousie circle, and always an acceptable speaker to a Halifax audience.

January 29, 1934.

The subject of the lecture to be given next Friday evening in the Dalhousie gymnasium is "The Twilight Zone of Matter", and the lecture promises to be a very interesting one. Ever since the subject of evolution came to the fore, scientists have been interested in the fringe between the living and the non-living world. Professor Pelluet, in her recent lecture, glanced at this matter from the point of view of the biologist. This week the matter will come up again from the point of view of chemistry.

The lecture will be given by Professor H. E. Bigelow, Head of the Chemistry Department in Mount Allison University. Professor Bigelow is well known throughout Canada as an able student and teacher of chemistry. For a while he was a professor in Brown University, Providence, Rhode Island, and a career of distinction was open to him there - as the Dean of Brown University recently said. A Nova Scotian by birth, Professor Bigelow preferred to return and teach in Canada.

The lecture will be keenly interesting not only to avowed students of science, but to the general public.

Secretary to the President.

The subject of next Friday evening's lecture, in the Dalhousie University Series, is: "Science and Letters - a problem of definition". The theme is very suggestive, as soon as stated; and perhaps it is strange that it has not been stated and treated hitherto.

The lecturer will be Professor E. W. Nichols, McLeod Professor of Classics, Dalhousie University. To his students and former students, and to readers of the Dalhousie Review, Professor Nichols is well known as a master of dexterous and distinguished style, with a whimsical play of mind, and a very characteristic phrase and utterance.

A large audience will doubtless be present to hear Dr. Hamilton Fyfe, the distinguished Principal of Queen's University, on Friday evening next. This will be the concluding lecture of the Dalhousie Series.

Principal Fyfe had an interesting scholastic and academic career. He received his schooling in Fettes College, Edinburgh, and proceeded to Merton College, Oxford, where he distinguished himself in classical studies. After teaching at Radley School for a brief period he returned to his college at Oxford as Fellow and Tutor, and remained there fifteen years. In 1919 he became Headmaster of Christ's Hospital, the famous "Bluecoat School" which has figured so largely in English literature, and which is known to so many as the school of Charles Lamb and Coleridge. This prominent position Dr. Fyfe relinquished in 1930 to become Principal of Queen's University.

Since coming to Canada Dr. Fyfe has been much in request as a lecturer and after-dinner speaker, for the good reason that he is a highly accomplished master of the spoken word.

He will describe Christ's Hospital, the ancient school, whose history and character he knows well. Those who hear his address will wish to revise the old saying that school is the dullest of all dull subjects.

The above is to appear in the Chronicle - Feb.14/34

It will be generally regretted that Principal Fyfe of Queen's University is unable to travel at present on account of illness, and that the date of his lecture at Dalhousie University has been postponed.

Principal Fyfe was to have lectured in the Dalhousie Gymnasium, Friday, February 16. It is now hoped that he can lecture on February 23.
